Central Networks and Technologies Ltd (Central) was founded in September 1991 by Christopher Mycock. In the earlier years Central was responsible for running the core ICT systems for many of the UK Magistrates Courts Services, which involved moving and hosting the mainframes and employing staff via TUPE. We also have a focus in the Housing Association and not-for-profit sector. In the last 10 years we have migrated many of our customers to cloud or partial cloud provision.

Our customer base is diverse in terms of size, geography, skills, business requirements and objectives. We have recognised this and created a solutions and services portfolio that can be tailored to meet the individual requirements of all our customers. Some of our customers have large ICT teams and only look for assistance where they have investigated and exhausted every avenue. Others are far smaller, where finance officers often take on ICT responsibility and need additional help and assistance. Central provides a bespoke service to each of our customers, providing best value for money and an ICT service which matches their requirements which assists them in delivering their objectives.

Central Networks N-Able Monitoring

Introduction

Grow and scale your business through efficient, easy-to-use IT automation with N-able™ N-central®. N-central offers you complete oversight and organization of your customers' IT networks from one dashboard. Our easy-to-use software can help you handle massive networks with minimal hassle through automation. Use our drag-and-drop interface to automate easily without the need for prior programming or scripting experience. Other features to help with automation include patch management, endpoint protection software, automated reports, self-healing, and NetPath, which allows you to monitor connectivity to your users' most critical cloud, on-premises, or hybrid applications. Other features include seamless PSA integration, direct-to-cloud backup, one-click backup, risk intelligence scanning, and an easy-to-use remote-control tool. Download the datasheet to find out how N-able N-central can help you grow and scale your business.

Security

Deliver a comprehensive security plan with global-to-granular functionality and control.

- Deploy AV or EDR and manage policies within N-central, addressing missed executions automatically.
- Help protect against malicious websites using AI and machine learning with N-able DNS Filtering
- Cache and serve patches efficiently with the N-central Probe.
- Configure patch profiles, maintenance windows, and rules.
 - Apply globally or get granular when you need it.
 - Patch on demand or automatically with auto-approval rules.
 - Ignore patches automatically with smart keywords.
 - Get deep visibility with smart patch status.
- Disk encryption manager: Encrypt disks and report on their status.
- Deploy and manage N-able Backup.

Service Scope

This service cloud deployment model is for public cloud and is not an extension of any other software services nor are there any constraints that perspective buyers should be aware of.

System requirements would be based on the per user license model & a SaaS platform with no additional requirements.

Implementation

N-Able is quick to deploy; an agent is installed on one or multiple machines to manage and monitor those devices. Customisation is carried out by Central Networks to ensure the right people are being notified of any problems.
