NexerIAM: Master Your Identity Governance

Empowering organizations with a unified platform for streamlined user lifecycle management, access control, and entitlement oversight.

Unify Identity Data

Gain a single, comprehensive view and control of all users across your organization through an intuitive interface.

Integrate with Entra ID

Automate Azure AD account provisioning and updates, significantly reducing manual effort and potential errors.

Automate Lifecycle Processes

Replace fragmented emails and tickets with structured, automated workflows for Joiners, and Leavers.

Manual Processes. Automated Solutions.

Traditional identity management relies on email chains, spreadsheets, and manual processes that create risk and inefficiency. NexerIAM replaces this chaos with structured automation that ensures accuracy, speed, and auditability at every step.

The Manual Challenge

Inconsistent Data

Email-based onboarding often omits critical details like department and manager assignments, creating downstream issues that require time-consuming corrections and workarounds.

Access Delays

Manual provisioning creates bottlenecks, slowing new hires' access to essential systems and tools. IT teams struggle to keep pace with requests, impacting productivity from day one.

Audit Gaps

Proving access approvals becomes impossible when relying on scattered chat logs or email threads. Compliance audits reveal governance gaps that expose the organization to regulatory risk.

The Automated Solution

Defined Inputs

Our platform enforces specific fields (e.g., Manager, Entity) before any request submission. Required data capture ensures every onboarding contains the complete information needed for accurate provisioning.

Rules-Based Automation

Approvals automatically route to the correct managers and entity owners based on predefined rules. No more manual ticket triage—the system knows exactly who needs to approve what, when.

Comprehensive Audit Trail

Every request is systematically logged, creating a reliable, searchable history of all actions. Compliance teams can instantly produce evidence of proper approval chains and access decisions.

Core Functions Dashboard

Manage all identity lifecycle processes from a unified interface

Joiner Process

Onboard new employees with automated account creation

Orphan Account Management

Monitor all user accounts

Audit Log & Traceability

Track pending approval requests and workflows

Non-Human Identity Management

Control your service identities

Entra Object Management

Manage shared mailboxes, distribution list, security groups, SharePoint sites and Teams channel

Leaver Process

Securely deprovision accounts for departing staff

Entitlement Management

Create and update access rights and licenses

Third Party Identity Management

Manage third party companies and identities

System Integration

Seamless real-time synchronization with Microsoft Entra ID

Request Overview

Third Party Company Management

Streamlined Third Party Onboarding

Securely onboard and manage third-party companies with integrated risk assessment and governance controls.

Company Details

Fill in comprehensive company information and designate a sponsor for oversight

Azure Integration

Connect third-party Azure environment to pull risk scores automatically

Risk Evaluation

Assess and evaluate risk scores to determine access levels and security requirements

Ongoing Governance

Monitor and manage third-party access and compliance continuously

Automating the JML Lifecycle

NexerIAM automates the entire employee lifecycle—Joiners, Movers, and Leavers—eliminating manual intervention and reducing errors. Each phase follows structured workflows that ensure consistency, security, and compliance throughout the user journey.

Seamless Onboarding

Standardized forms capture all new user details, initiating an automated workflow from user submission and manager approval to automatic Entra account creation.

Impact: Fully automates Entra (Azure AD) account provisioning, reducing onboarding time from days to hours.

Secure Offboarding

Set a definitive "End Date" for employees or contractors. The system automatically disables accounts and revokes access on the scheduled date.

Action: Prevents unauthorized access, ensuring security compliance upon departure and eliminating orphaned accounts.

2

3

Dynamic Attribute Updates

Administrators update user attributes like Manager or Department through the Update Identity workflow. Each change triggers an approval process, ensuring data integrity and validity.

Control: Ensures data accuracy through structured approvals, preventing unauthorized or incorrect changes.

Intelligent Inventory & Visibility

Unified Account Inventory

Comprehensive Account View

Gain a consolidated view of all accounts, encompassing those managed by NexerIAM and discovered in Entra ID.

Identity-Account Mapping

Seamlessly map accounts to their identities, providing clarity on ownership and purpose for each.

Instant Account Status

Verify account status (active/disabled) instantly, eliminating the need to log into the Azure portal and saving valuable time.

Master Your Entitlements

Precision Access Control

NexerIAM delivers powerful tools to define, manage, and secure access across your organization.

Define Entitlements

Create and define groups, distribution lists, and shared mailbox directly within the tool using structured workflows.

Maintain Accuracy

Easily update entitlement descriptions and ownership details as business needs evolve.

Gain Visibility

A dedicated "View Entitlement" screen shows all available access options at a glance.

Operations & Tracking

Gain Visibility

NexerIAM provides comprehensive tracking and configuration, delivering real-time insight into your identity operations.

Request History

Access a simple, searchable log of all past and active requests across Joiner and Leaver workflows.

Real-time Status

Users and administrators can instantly view request statuses: "In Progress," "Completed," or "Rejected."

System Configuration

Manage system settings, approval mappings, and workflow customization from a dedicated administrative area.

Experience the advantage

1

Perfect for Medium Enterprises

Simplify your Identity Governance with maximum efficiency

2

IAM as a Service

More than SaaS: NexerIAM delivers a 5-in-1 service with change management, integration, and daily administration—at a fixed price.

3

A secured solution

A secure, Azure-contained solution that protects your data without expanding your attack surface.
