

Generation Digital

The card is just the start.

Everything you need to boost spending power and control — and eliminate manual work.

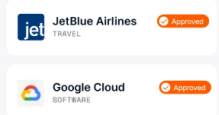

Corporate cards

Spend smart globally with powerful cards and built-in controls.

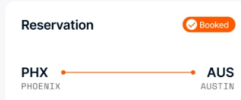

Expense management

Use AI to automate approvals and expense reports. Track in real time.

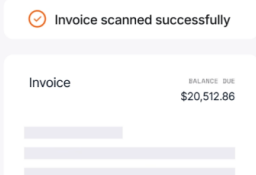

Travel

Simplify global travel with in-app booking and management.

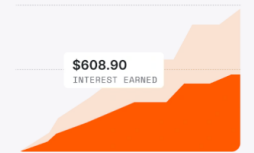

Bill pay

Save time with AI-powered invoice entry and payment automation.

Banking and treasury

Save, spend, and grow your cash with up to 4.02%+ — from day one.

Solutions for every stage of growth.

Startups

Get the only complete financial stack designed to help start and scale your business.

Mid-size companies

Spend smarter worldwide with AI-powered budgets, expenses, payments, and travel.

Enterprises

Simplify global travel and expenses with automation that makes compliance easy.

Supercharge your financial operations.

Maximize every resource with AI-powered controls, payments, and accounting.

Control spend before it happens.

Set budgets and allocate spend limits with auto-enforced controls that empower employees to spend wisely. Track and adjust in real time to keep everyone on budget and maximize impact.

Make doing your expenses easy.

Make expenses a breeze for employees and managers with automated receipts, an AI-powered expense assistant, in-app travel bookings and itinerary changes. All in a five-star mobile app.

Maximize your spending power.

Unlock up to 4.02%[†], fast global payments, up to 30x higher credit limits, and cash back with a Brex business account. Plus, safeguard your capital with up to \$6M in additional FDIC insurance through our program banks.

Pay vendors faster and easier.

Save time with AI-powered automation of invoice entry, approval, and payments. Issue vendor-specific cards for any teams with per-transaction limits and procurement approval flows.

Accelerate accounting with AI.

Save time with AI-generated suggestions and 1,000s of two-way ERP integrations. Book accruals for incomplete expenses with one click to close the books every day and automate GL coding by entity globally.

Save and earn more, only with Brex.

AI-powered automation

4,250 hours

Average time saved per year with Brex's expense and accounting automation.

Best-in-class treasury

Up to 4.02%+

Same-hour liquidity and built-in treasury that makes you money.

Superior policy compliance

99%

Average rate of expense policy compliance by employees on Brex.

Account security

Encryption

Our website uses industry-standard encryption to ensure protected transmission of data (HTTPS): AES-256 bit or better for RDS and S3 data encryption for data at rest and TLS 1.2 or better for transit.

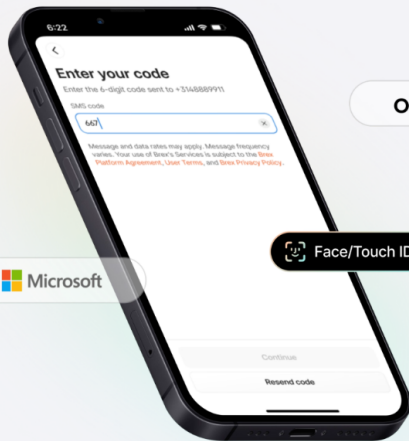

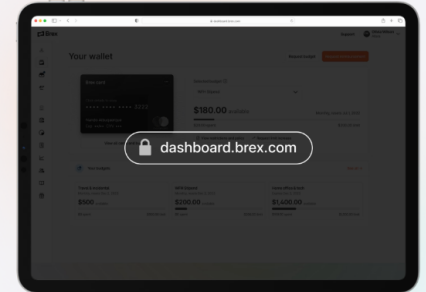

Idle lockouts

Brex forces automatic signouts after inactivity to prevent unsanctioned access or use of the user's account.

Security policy

Brex enforces a strict content security policy and iFrame protection to mitigate the threat of attacks such as ClickJacking.

Face/Touch ID

Microsoft

Google Workspace

Authentication

Secure ID and password

Brex enforces strong password requirements and supports mobile biometric authentication (Face ID/Touch ID).

Activity confirmation

Brex leverages both automated and manual review mechanisms to confirm account changes such as password resets.

Device and ID verification

We require a one-time authorization for each browser on every device you use to sign in to Brex, as well as two-factor authentication to further protect your Brex account.

Single Sign-On (SSO) integration

Brex Empower's SSO feature enables a secure — yet seamless — login experience through Okta, Microsoft, Google Workspace, and other identity providers (IdPs) that support OIDC or SAML.

Security at Brex

Product security

Our Security & Privacy Center (SPC) enables Brex users to view their cookie preferences, device permissions, active sessions, data visibility, and more.

[Learn more about SPC →](#)

Security by design

Security testing and code review — as well as mature logging, monitoring, alerting capabilities — are built into our engineering workflows, including the software development lifecycle.

Application security

Brex has a dedicated internal team of security engineers focused on the technical security of our web and mobile applications. We conduct ongoing penetration tests to proactively prevent weaknesses.

Incident response

Brex follows an established procedure for responding appropriately to potential incidents. All suspected incidents are managed by our Security team with mature logging, monitoring, and alerting capabilities.

Built from scratch

Our experienced engineers built the critical components of our financial product in house to be in control. This allows us to easily make upgrades, patch systems, and continuously iterate on security.

Regulatory compliance

In addition to being SOC 1 Type II, SOC 2 Type II, and PCI-DSS compliant, Brex also fulfills requirements from FINRA, IT General Controls, NY Department of Financial Services, and more. Beyond those baseline requirements, Brex safeguards customer data with enhanced controls to ensure best-in-class protection.
