Flexible workflow builder

Workbench

Hi, can you reset Jennifer Browne's Okta password?

Certainly! Firstly we need to confirm Jennifer Browne's email address. Let me search for that in our systems.

Lookup employee details
Security

I see that her email is jbrown@email.com. Let's reset her password now.

The foundation for modern work, transforming failed pilots into successful deployments.

The intelligent workflow difference

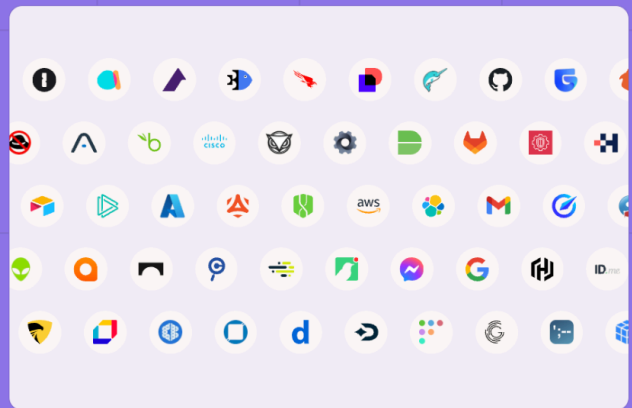

Too often, valuable work is constrained by outdated systems, fragmented tools, and inaccessible data. Tines creates the foundation to deploy intelligent workflows – from fully agentic to human-driven – that drive business impact.

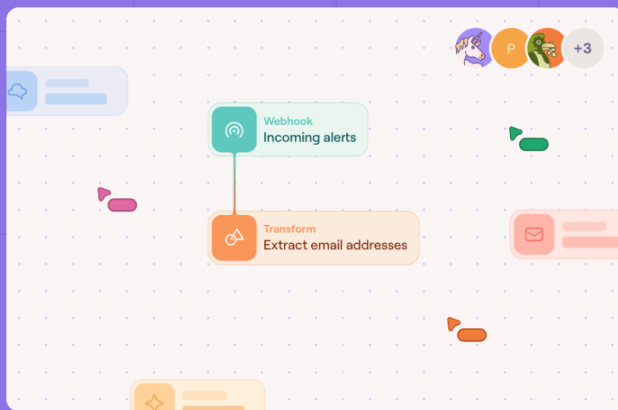

Intelligent workflows

The secure, reliable integration layer that connects teams, tools, and data.

Vendor-agnostic

Secure integration across your stack including LLMs, MCPs, and internal tools.

For the whole team

Intuitive, flexible ways for the whole team to build and collaborate across workflows.

Born in security

Governance, guardrails, and monitoring across every surface of the workflow.

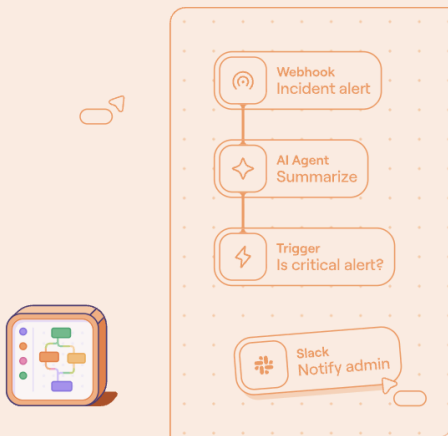

Meet the platform

Build, run, and monitor your most important workflows with the platform loved by the world's leading security-minded companies.

Tines changes the way teams operate

Improve operational efficiency and ROI on tech investments

Work through tech debt with your existing resources to modernize your infrastructure. Tines customers find their teams:

- Take on more projects
- Communicate better across stakeholders
- Get rid of software bloat

Accelerate your AI strategic goals

Implementations of AI and LLMs are plagued with delays created by security and privacy concerns. AI in Tines is:

- Private and secure by default
- Free from training, logging, networking, and storage via AWS Bedrock

Mitigate risk and reinforce your security posture

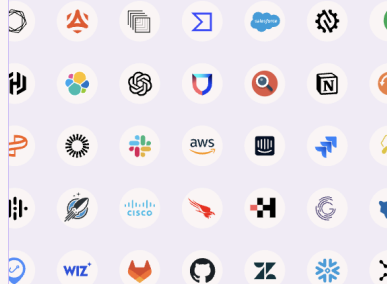

Stop vendor lock-in and single points of failure. With Tines, you gain:

- Agility to your evolving ecosystem
- Adherence to compliance and corporate policies

Build, run, and monitor your most important workflows

Private and secure AI, always [Learn more →](#)

Hey Workbench! Our primary AWS bucket's policy was somehow updated to public access a few hours ago. Can you change it back to private please?

Sure! Let's update the policy with this AWS CLI command:

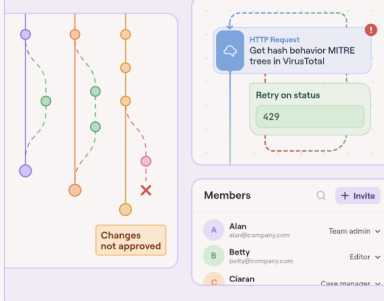

Run AWS CLI command
AWS CLI

× Cancel

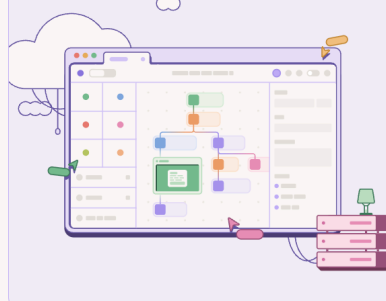

<> Inspect

✓ Confirm

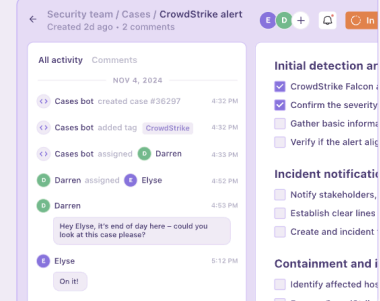

Enterprise-grade controls and monitoring

Deployed your way: hosted, self-hosted, or hybrid

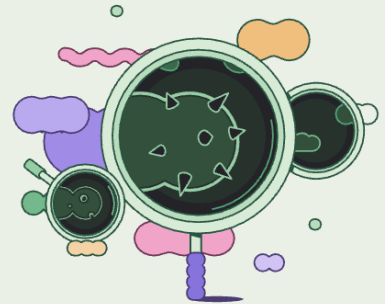

Advanced collaboration

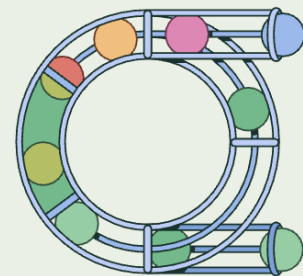

Zero trust

Automate and orchestrate rapid response to security events, seamless system integration, and managing critical security processes like continuous authentication, access control, and threat detection across distributed environments.

Governance, Risk and Compliance

Organizations maintain consistent compliance standards, risk assessments, and gain real-time visibility into their GRC posture, ultimately reducing manual effort and improving overall security governance.
