Splunk Health Check & Assessment Services

Independent assessment of Splunk platform health, performance and readiness

Splunk Health Check & Assessment Services provides an independent, structured assessment of existing Splunk Cloud or Splunk Enterprise environments. The service gives organisations a clear, evidence-based view of current platform health, performance and resilience, and identifies where targeted improvements can deliver greater value and reduced operational risk.

The service is designed as a low-risk entry point for organisations seeking assurance, baseline insight, or planning support ahead of optimisation, migration or enablement activity.

The service provides a focused assessment aligned to the buyer's environment and objectives. Typical activities include:

- Review of Splunk platform performance, including search, indexing and ingestion
- Configuration and tuning review against recognised best practice
- Deployment architecture and scalability assessment
- Review of security configuration and access controls
- High-level review of installed applications and integrations
- Storage utilisation, retention and growth assessment
- Review of resilience, maintenance and operational practices

Scope is agreed at the outset to ensure minimal disruption to live environments.

Key Deliverables

- Splunk Health Check report with key findings and observations
- Baseline snapshot of current platform health and capability
- Identification of risks, inefficiencies and technical debt
- Prioritised, practical recommendations for improvement
- Clear next steps to support optimisation, resilience and future growth

Outcomes for Buyers

- Independent assurance of Splunk platform health and readiness
- Improved platform performance and operational efficiency
- Reduced resilience and operational risk
- Better alignment between platform investment and value
- Increased confidence in scalability and long-term suitability
