

## Cribl Cloud – Stream, Edge, Search and Lake

The information below provides base pricing for each of the Cribl Products. Pricing is determined by the vendor and subject to change. Please contact Networkology Sales team for the latest pricing ([sales@networkology.com](mailto:sales@networkology.com)).

Pricing from Cribl is in USD. Networkology will convert pricing to GBP using the appropriate, current exchange rate at the time of quotation and procurement.

### Cribl Stream

## Stream - Cloud Ingest

Route data from any source to any destination. Cribl Stream charges for data ingest plus the infrastructure resources needed for processing your data. Pay for ingress, but never for egress — send processed data to as many destinations as you need.

|                                                                                                                  |                                                                                                                   |                                                                                                                |

# Stream - Cloud Infrastructure

## Per Worker Group

Use Cribl-managed infrastructure to handle your Stream processing -- networking, compute, memory, etc. Costs vary depending on the region your Workers are deployed. Keep costs low by processing data close to the source. [Read the blog.](#)

Cloud Hosting Provider parameters are required for accurate costs, the below provide an example for AWS (US-EAST region)

| Throughput (MB/s) | Cost in credits |
|-------------------|-----------------|
| 12 MB/s           | 1.3 Credits/Hr  |
| 24 MB/s           | 2.6 Credits/Hr  |
| 36 MB/s           | 3.9 Credits/Hr  |
| 48 MB/s           | 5.2 Credits/Hr  |
| 60 MB/s           | 6.5 Credits/Hr  |
| 84 MB/s           | 9.1 Credits/Hr  |
| 120 MB/s          | 13 Credits/Hr   |
| 156 MB/s          | 16.9 Credits/Hr |
| 180 MB/s          | 19.5 Credits/Hr |

# Software License

If you need to manage and run your own infrastructure, we offer volume-based licensing for Stream and Edge.

## Cribl Edge

# Edge - Cloud Ingest

### Daily Ingestion Rates

Collect logs, metrics, and application data from anywhere. Only pay for ingestion once — data sent from Cribl Edge to Cribl Stream is billed a single time. Control costs by dropping unnecessary data at the edge before it's ever collected or analyzed. No surprises, just smarter data collection.

## Cribl Search

# Search - Usage-based Consumption Pricing

Search data in-place without having to collect or store it first. Usage-based consumption pricing means you only pay for what you search. Searches are calculated by the number of CPU hours it takes to complete a search – most searches take less than a second! This is ideal if you want to avoid fixed contracts, only need to run a limited number of searches, or want to try Cribl Search before buying.

## Cribl Lake

# Cribl-Managed Data Lake

Store data in open formats for easy access and retrieval via Cribl Stream. Cribl Lake is priced based on the volume of data stored and how long it's retained — based on 30-day retention. You are only charged for the amount of compressed data stored per month, not the raw ingested data volume.

### Direct Access

Direct Access charges are based on the total volume of data ingested; storage costs are billed separately at standard Lake rates. Direct Access is designed to provide a cost-effective way to store high-volume, less frequently accessed log data, easily accessible to Replay with Stream or query with Search.
