DYNAMIC PUBLISHING

DATASHEET

Convey empowers dominKnow authoring teams, providing dynamic publishing and delivery services that increase efficiency for your formal and informal learning delivery.

Convey sits between dominKnow | ONE and your end-user delivery system, so you can make your content available to learners on multiple delivery systems with one click, ensuring they always have the most up-to-date information in the format they need it.

Your team can rapidly publish and update content using Convey, without loading and updating SCORM, AICC, and CMI5 packages into an LMS or LRS - it's a simple 3-step process:

1. Author in dominKnow | ONE
2. Publish to Convey
3. Add the Convey link/stub package to your LMS or LRS

You can also send xAPI statements to an LRS from any Convey-hosted content to augment and improve your existing analytics.

Improved formal learning via your LMS

Using Convey can reduce time spent posting, updating and maintaining formal learning content by as much as 90%.

When making changes to your content, there is no need to re-upload revisions into your LMS - time-consuming actions like content updates, or downloading / uploading files can happen instantly. Simply republish the packages and dominKnow | ONE will send the updates to Convey automatically. Your learners will immediately receive all the changes.

Just-in-time support with informal learning

With Convey you can also instantly publish and deploy searchable knowledge bases, job aids and more, so your employees and customers can access the knowledge they need in the flow of work. Your informal learning is hosted on Convey so there's no need to find a place in your IT infrastructure to put it.

Publishing a Web Package to Convey creates an Instant Public Link under the Share Panel for easy, immediate distribution.

Synchronised single source design

dominKnow | ONE simplifies the content creation, management and delivery process by allowing you to share content across a wide variety of learning modalities. By synchronising your content, you can immediately publish edits and changes so all of your learning stays up-to-date, saving time and effort.

Convey Analytics and Reporting

The Analytics for Convey Dynamic Publishes report provides key usage metrics for all hosted content. This tracks data points such as Total Unique Users, Total Publish Registrations (formal learning), and Total Share Registrations (informal learning), helping you manage capacity and validate content reach.

About Larmer Brown

Larmer Brown is Reseller and Services Partner for dominKnow Learning Systems, offering the award-winning dominKnow | ONE to support our clients' learning initiatives since 2012. Our services include single and multi-tenancy hosting (in UK, Europe and Middle East), implementation and technical support, consultancy, training and content development, as well as customised Discovery Workshops.
