Service Overview

Background

Cyber security has become a critical business concern, demanding specialist expertise that many organisations find difficult to resource internally. Across industries and organisation sizes, leaders are facing common challenges: the rapid acceleration of cyber threats, increasing regulatory and customer expectations, and growing pressure to demonstrate a mature, credible approach to cyber risk. At the same time, compliance requirements such as GDPR have shifted cyber security firmly from a purely technical issue to a core business and leadership responsibility.

Quorum Cyber's Solution

Quorum Cyber's Cyber Leadership service is designed to deliver clear, practical outcomes for organisations at any stage of their cyber journey. The service provides trusted expert guidance to help organisations understand their cyber risks, meet regulatory and customer expectations, and make confident, informed decisions. Whether supporting a short-term improvement initiative or embedding stronger cyber leadership into everyday business operations, the service delivers clarity, direction, and measurable progress without the cost and complexity of building specialist capability internally.

Differentiators

- **On-Demand Cyber Leadership Expertise**
Provides access to experienced cyber security leadership without the need to hire a full-time specialist, giving organisations the right level of expertise when they need it.
- **Business-Focused Guidance, Not Technical Jargon**
Translates cyber risk into clear business impacts and priorities, enabling leaders to make confident decisions without requiring deep technical knowledge.
- **Outcome-Driven Engagement Model**
Flexible delivery supports both short-term initiatives to rapidly improve cyber maturity and longer-term partnerships that embed cyber leadership into the organisation.
- **Trusted, Independent Advice**
Offers objective, vendor-agnostic guidance focused on “doing the right thing” for the organisation.
- **Support for Regulation, Assurance, and Customer Confidence**
Helps organisations demonstrate cyber maturity, meet regulatory expectations, and respond confidently to customer due diligence and assurance requests.
- **Designed to Strengthen Organisational Culture**
Goes beyond policies and controls to influence behaviours, accountability, and leadership ownership of cyber security across the organisation.

Service Features

Quorum Cyber's experts are highly skilled in supporting organisations to strengthen their cyber security against known and unknown threats.

We offer several Cyber Security Leadership engagements:

- **Virtual CISO and Security Director-as-a-Service (SDaaS)**
- **Cyber Security Strategy and Transformation:** helping with producing security strategy and transformation programmes
- **Cyber Risk and Resilience Services:** working with customers on cyber risk management and improving cyber resilience
- **Security Governance and Compliance:** ensuring that information security has the right oversight and compliance processes in place
- **Security Operating Model Definition:** working with our customers to ensure that they are operating their security function in an efficient way to enable their business or organisational ambitions
- **Board Advisory:** working with C-Level or Executive teams to advise on key security issues; providing guidance and training on how to effectively challenge organisational security issues
- **Third-Party and Supply Chain Maturity Risk Assessment:** ensure that the processes and procedures for managing third-party and supplier security risks are fit for purpose and are addressing the risks posed

| Service Benefits

Leadership services contribute to a proactive, resilient, and secure organisational environment. They provide your organisation with many benefits:

- **Cost-effectiveness:** access on-demand security resources without the need for permanent commitment
- **Flexibility:** scale security resources based on your organisational security needs
- **Strategic Guidance and Decision-Making:** aligning security efforts with business goals, make informed decisions on cyber security investments and cyber risk management
- **Risk Reduction and Resilience:** Improve your cyber resilience to ensure you can respond, recover and thrive following a security incident
- **Culture of Security Awareness:** providing Board Advisory services, we assure organisational awareness programmes to enhance your employees' vigilance against cyber threats
- **Compliance and Regulatory Adherence:** be assured your organisation is compliant with industry standards and data protection regulations
- **Vendor Management and Partnerships:** managed third-party vendors for security risks help build strong partnerships with security providers, enhancing overall resilience
