AZURE INTEGRATION SERVICES · DELIVERED BY WATERSTONS

# Your systems, finally **talking** to each other.

Data gets entered once, then flows everywhere it's needed — automatically. We design, build and run it on Azure.

## Zero

duplicate data entry

Enter it once. Every connected system knows about it.

## Minutes

not overnight batches

Change something in one system and the rest follow.

## Private

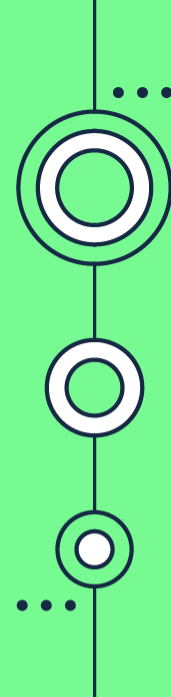

by design

Vault-stored credentials, no public endpoints.

## Modular

built to add the next one

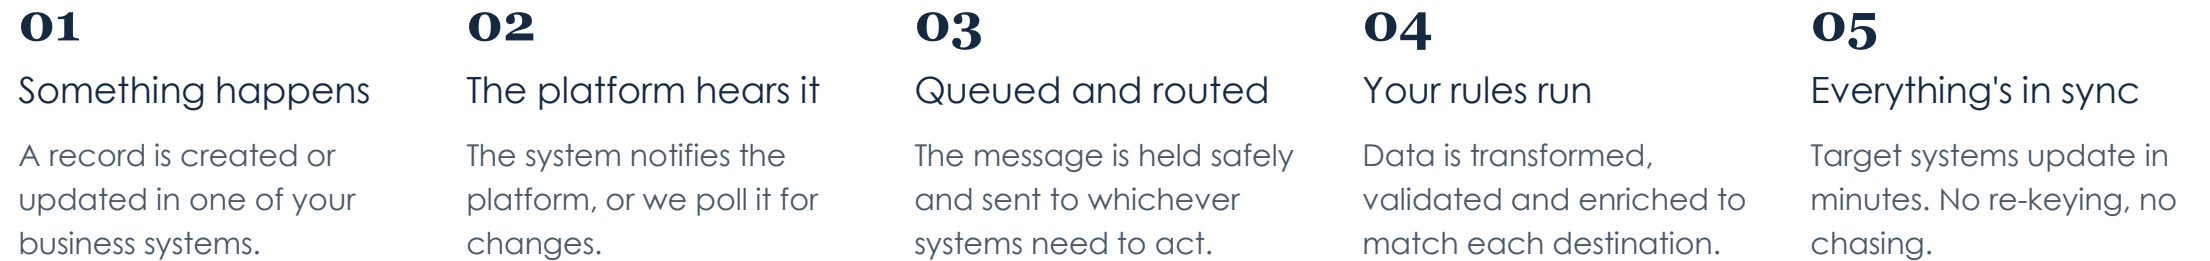

New system? A new connection, not a rebuild.

# One event. The whole chain, handled.

Someone creates a record — a new starter, a new project, a new order. From there, nobody has to do anything.

## BUILT ON AZURE INTEGRATION SERVICES

Logic Apps & Function Apps

Service Bus queues & topics

Key Vault

Private endpoints & site-to-site VPN

Application Insights monitoring

Infrastructure as code (Bicep)

Every message is translated into one common business model, so your systems never talk directly to each other — and swapping one out doesn't break the rest.

# Start with a conversation, not a contract.

We won't waste your time or money if we don't think we can help. A free assessment tells us both what's worth connecting first — then we scope and price it properly.

STEP ONE · NO CHARGE

## Free integration assessment

A short workshop with the engineers who'd build it. We map your systems and tell you honestly what's worth doing first.

THEN · SCOPED PER ENGAGEMENT

## Platform build, then integrations

One-time design, build and deployment — then each connection scoped and built individually.

ONGOING · BILLED BY MICROSOFT

## Azure hosting

Your Azure subscription runs the platform. Optional support contracts on top.

Contact us through the [Microsoft Marketplace listing](#) to book your assessment.

Microsoft Solutions Partner for Digital & App Innovation, Data & AI, and Infrastructure.  
Indicative figures only — a tailored quote follows discovery.
