

Environments as a Service

Environment Management strategy delivers non-production environment management across provisioning, maintenance & support for all testing phases, providing a full service wrapper to ensure right fit environments are available and fit for purpose when needed.

This is implemented on our proven Test Environments Management (TEMs) framework.

Service features

- Environment demand, build & deployment management
- System integration
- Monitoring and health checks
- Data request management (refresh, masking)
- Configuration management
- Incident and problem management
- Cloud instance management
- Environment roadmap planning and platform design

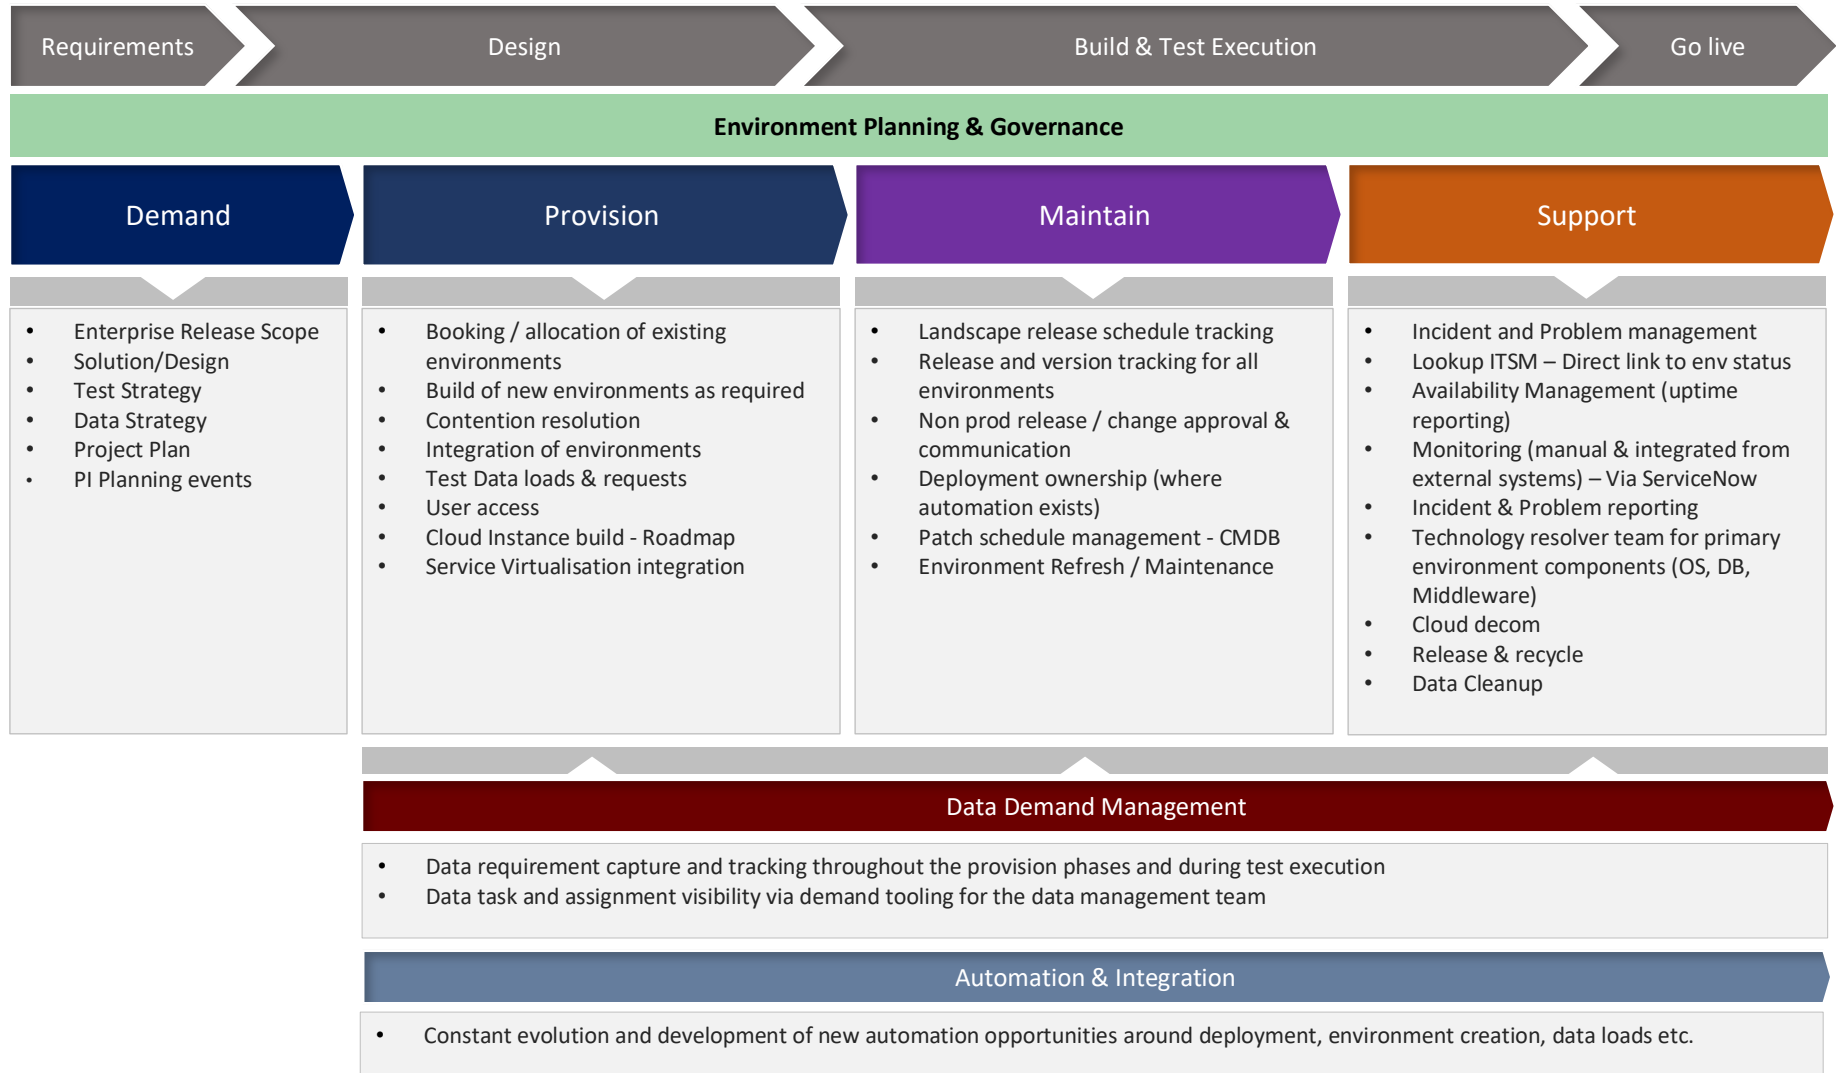

Service benefits

EaaS focuses on the environment availability and utilisation of physical, virtual & cloud infrastructure.

Designed to provide end-to-end support for managing non-production environments. The framework is a blend of ITIL-based processes, operational maturity models and technology expertise with close alignment to the SDLC and Testing Life cycle; this drives prompt and proactive management of the non-production estate.

Tooling maturity allows for seamless integration with DevOps platforms for release management, environment provisioning (on premise & cloud) and general reporting.

EaaS – Engagement Flow
