Addressing your challenges

While all schools are unique, you typically experience common challenges:

Communicating with stakeholders

You have to clearly articulate your vision and values to staff, and students.

Teacher and SLT workload

You have to find ways to reduce the amount of time spent creating, uploading and managing learning resources.

Collaboration and engagement

Collaboration has been proven to positively impact learning in a number of different ways, but how do you foster a more collaborative culture?

Ensuring the quality of resources

You would welcome ways to drive up the quality of teaching and learning resources.

Developing leadership and talented teachers

Recruiting, retaining, supporting and developing staff is a huge issue.

Using innovation effectively

How do you ensure staff and students are competent and confident in using technology, and therefore maximise your investment?

Managing tight budgets and limiting technology creep

The last thing you need is to introduce yet another platform, but wouldn't it be great to get more out of what you already have? The solution provided by Cloud Design Box will help you to overcome each of these challenges and support your school improvement plan.

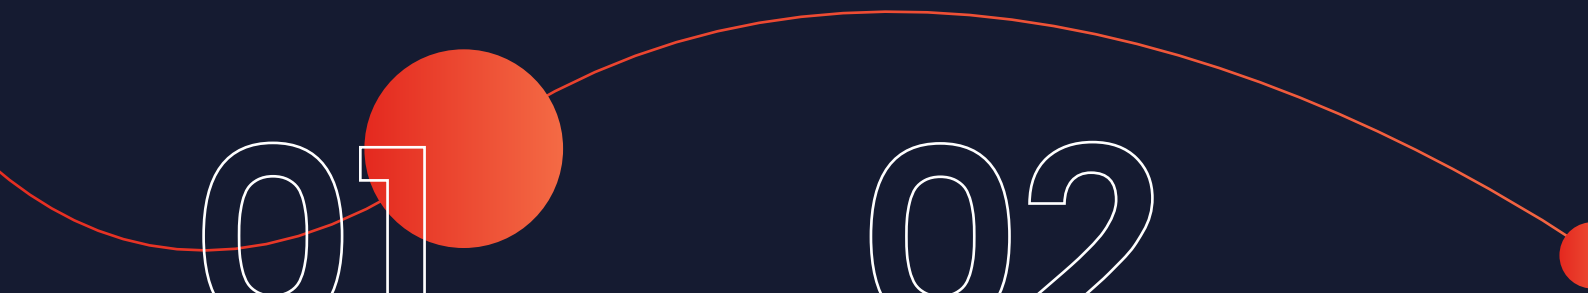

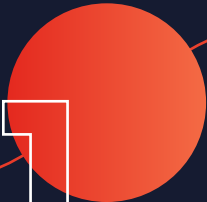

Supporting **your school** **development plan**

All too often we see organisations that have standardised on Microsoft technology but simply don't realise the benefit from it that they could.

That's why we set up Cloud Design Box: to help schools to harness the full potential of Microsoft 365, Teams and SharePoint.

We do this in two ways:

01

We build a powerful online school hub to improve communication, foster collaboration, maximise productivity and reduce workload.

02

We then provide comprehensive training and on-going support designed to maximise user adoption and ensure best practice.

Our service helps ignite teaching and learning, producing happier teachers and more engaged students!

Did you know?

Moving to the Cloud can help you reduce costs AND save huge amounts of admin, IT and teacher time! What's more, as a Microsoft Global Training Partner, our CPD-certified training will help all your staff rapidly gain confidence in the technology to achieve just that.

Achieving your objectives

Your internal communications platform

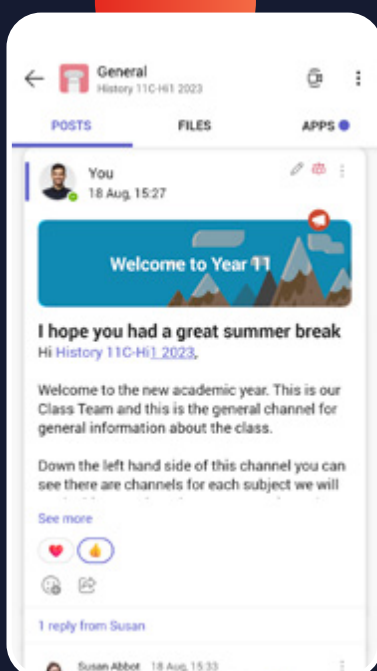

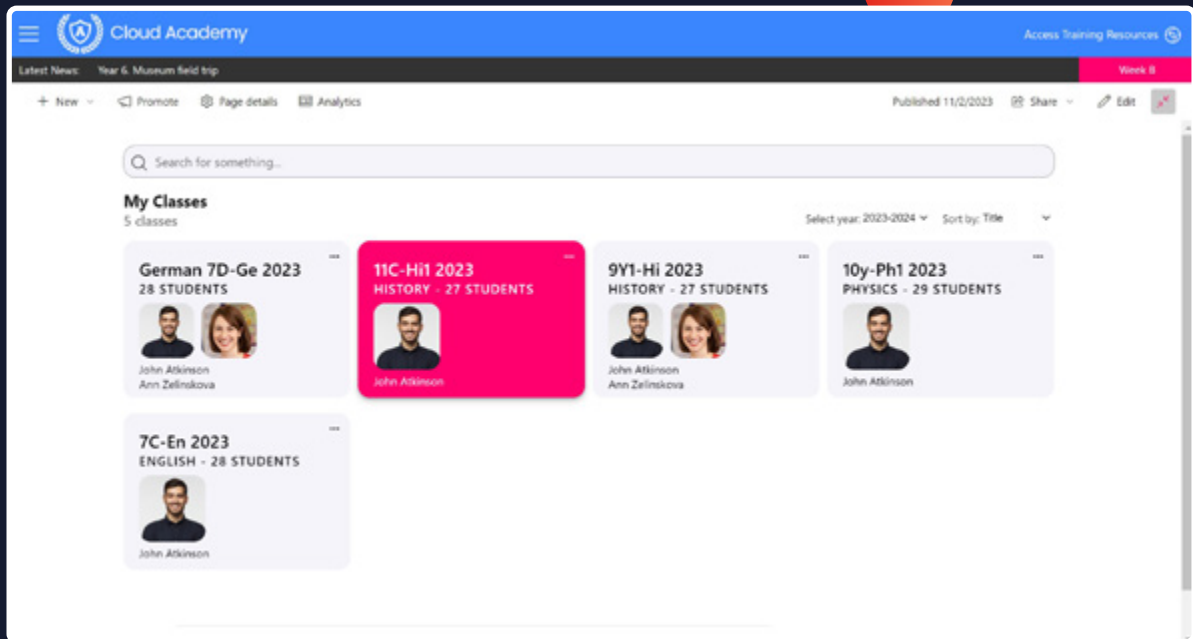

Bring all of your teaching and learning apps, resources and communications channels together with a secure, central online portal built in Teams and SharePoint.

Your communications hub can feature news, information on key initiatives, training videos, policies and procedures etc. It will reflect your school brand and be extremely simple to edit.

Achieving your objectives

Working and learning, collaboratively

Using a tried and tested, flexible information architecture, your mission-critical files and learning resources will be stored securely in a system that is both intuitive to use and personalised to staff and pupils, wherever they are.

Achieving your objectives

Working and learning, collaboratively

The menu structure will replace the staff and student 'drives' that you might currently have in your organisation. Channels are likely to include the following:

Information services

Provide access to staff resources, guides, policy documents, handbooks, briefing notes, lunch rotas, etc. and automate certain business processes in SharePoint or point to specific services such as the library or IT.

Collaboration

In these confidential areas, Governors, Heads of Year, Safeguarding Leads or Departments can work together. Members of these teams can also chat and video call with other members of the group.

Classes

Automatically created each year for all the classes that exist in your school MIS, such as English 7C or PSHE 11E. Set student assignments, host online lessons and mark work. Students will also have access to drop-off areas for their work.

Subjects

A centralised resource area for each subject, connected to class teams so that teachers can re-use their resources with each appropriate class, year after year. The channels are personalised for the classes a teacher leads or the classes that a student is enrolled in, and students can view (but not edit) resources from previous years.

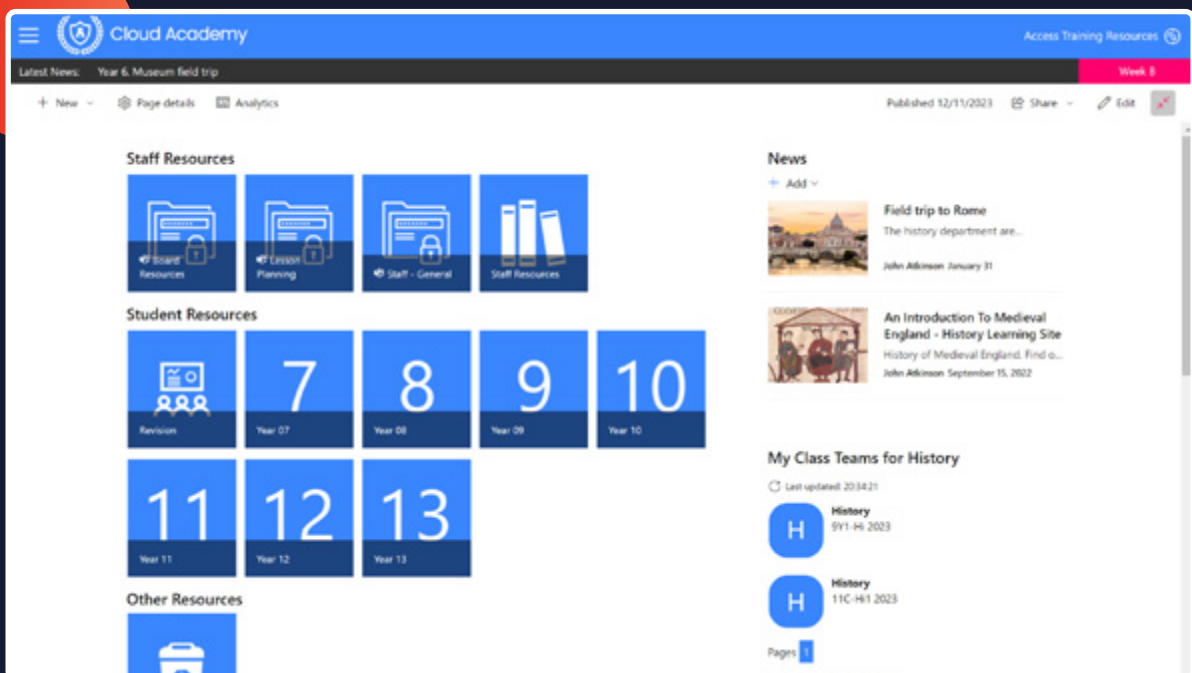

Achieving your objectives

Improving the quality and consistency of your resources

Creating and sharing quality resources in the cloud is no longer exclusive to tech-savvy teachers – everyone can collaborate and share!

With a Cloud Design Box solution, you'll find that teachers no longer work in silos. Teachers can share their work to the benefit of their colleagues.

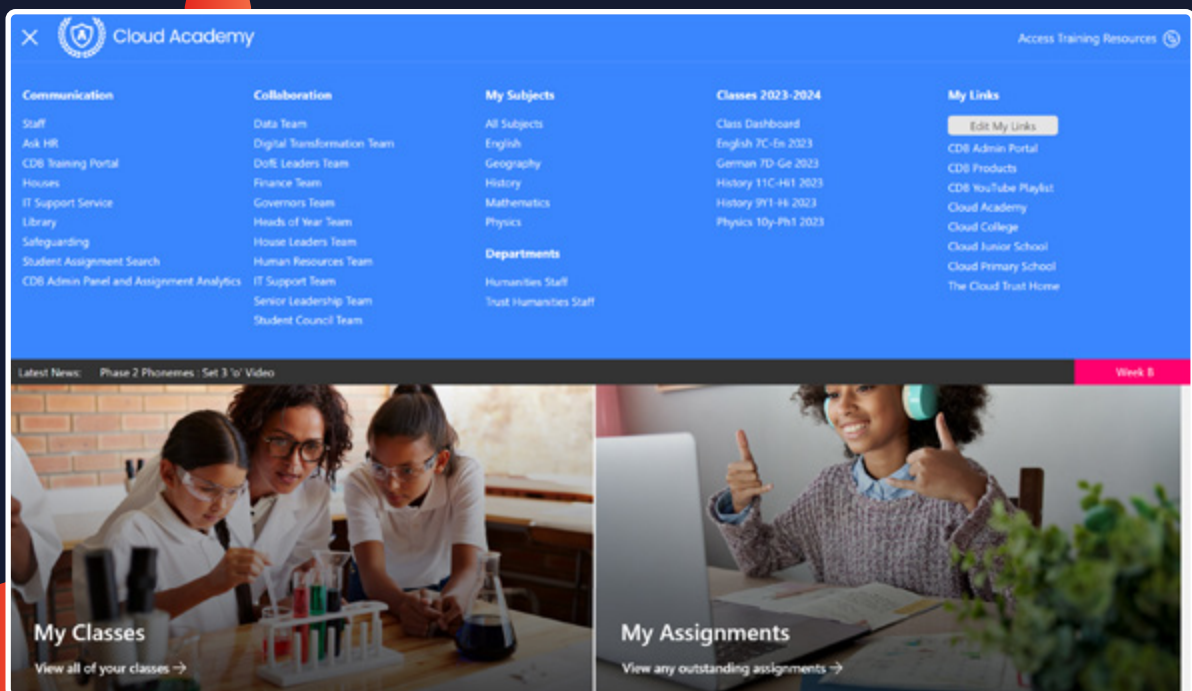

Phase and department leaders can easily check and drive up the quality of resources and ensure that all the necessary work is being set, thanks to assignment analytics.

Achieving your objectives

Allowing teachers to teach

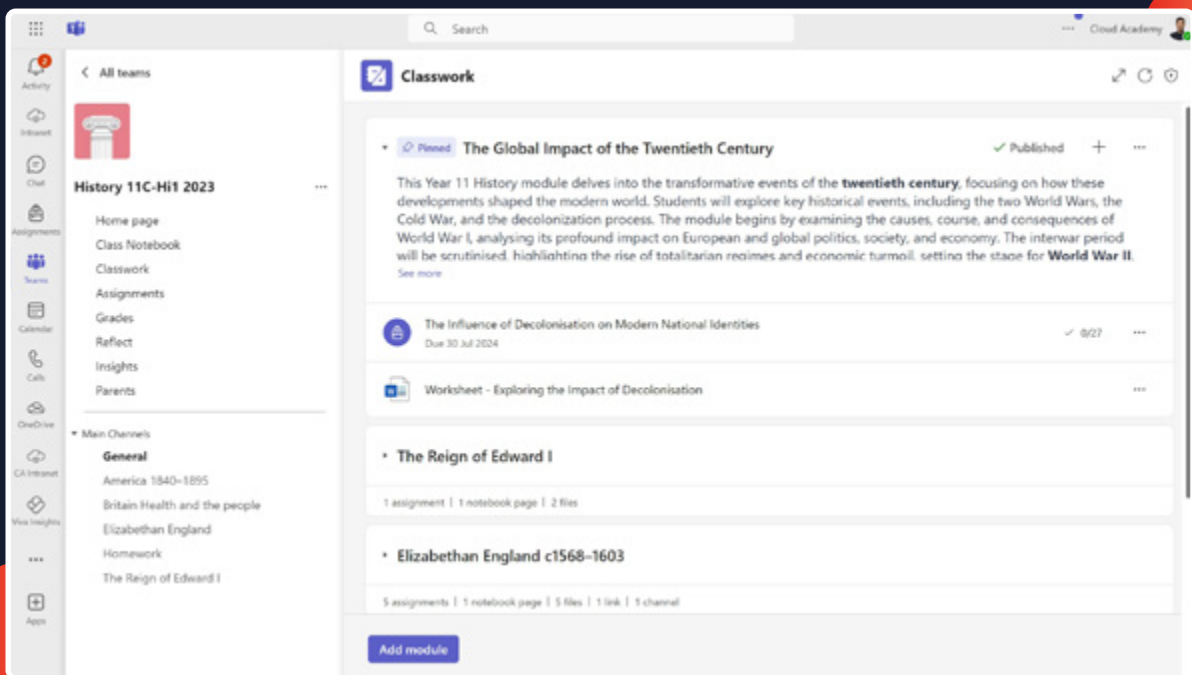

Cloud Design Box will deliver a global, personalised menu for easy, clear navigation so that all your staff will be able to take advantage of the technology you have invested in.

Save huge amounts of time thanks to automated, central resource areas where teachers can co-author, share and re-use resources year after year.

Achieving your objectives

Supporting your school's continuous improvement

We help fast-track your School's digital transformation, by harnessing the full potential of Microsoft tools. We do this with a step-by-step on-boarding process and on-going support and training, all facilitated by a long-term user adoption strategy.

Staff will quickly gain confidence and embrace a more effective way of working. You'll see just how much more engaged, productive and efficient they will become!

Let's work together in partnership

Changing the way that people work can be difficult. However, the benefits are clear and the impact, profound. We have a vested interest to ensure that the project is a tremendous success, so we're here to support your growth, every step of the way.

Helping to communicate your vision – detailing the benefits to teachers – and to pupils.

Giving key people ownership over the project – it's important that the project is not seen as being about technology – it needs to be teacher and learning driven.

Ensuring there's a long-term plan and milestone dates in place.

Supporting user adoption with training and conducting a technical and teaching and learning handover.

Measuring success and resolving any issues.

Supporting with ongoing adjustments to your strategy.

"Cloud Design Box is firmly embedded in our long-term digital strategy. We are not only delivering key learning to our young people, but equipping them with essential digital skills that they will need in their future workplaces. I don't want to exaggerate, but I think this is a revolutionary moment for us."

The Ashcombe School

About Cloud Design Box

We are Microsoft partners and SharePoint and Teams experts, based in the UK, who support over 500 schools and school groups internationally by providing state-of-the-art intranets.

We enhance working and learning through unified communication and collaboration, driving opportunities for greater success and improved wellbeing.
