Log Management (FortiAnalyzer)

Log Management (FortiAnalyzer)

FortiAnalyzer is a centralized logging, analytics, and reporting appliance. It's designed to provide organizations with comprehensive visibility into their network security infrastructure. It collects, analyzes, and correlates log data from Fortinet security devices, including firewalls, switches, access points, and more, to help organizations monitor and manage their security posture effectively.

Benefits include

- Centralised visibility into security events and threats
- Improved threat detection and incident response
- Comprehensive compliance reporting and auditing
- Data-driven security analytics and decision making
- Streamlined security operations and investigations
- Scalable log management and data retention
- High availability and fault tolerance options
- Role-based access control and multi-tenancy support
- Integration with broader Fortinet Security fabric
- Flexible deployment models (Cloud and on-premises)

FortiAnalyzer Features

FortiAnalyzer is a centralized logging, analytics, and reporting appliance. It's designed to provide organizations with comprehensive visibility into their network security infrastructure

Centralised visibility into security events

Enable your organisations to proactively identify, respond to, and mitigate potential cyber risks and incidents more effectively and efficiently.

Log management and data retention

Enable comprehensive forensic analysis in the event of a security incident, and provide valuable insights for optimising system performance and user experience.

Role-based access control and multi-tenancy support

Enhance security and operational efficiency by ensuring that users have appropriate access levels based on their roles and responsibilities, while enabling multiple independent entities or customers to leverage shared resources securely within a single software instance.
