1.0 Introduction

This document defines our Django development service.

We provide a range of Django development services, from supporting an in-house team with additional specialist knowledge (for example via code review) through to green field whole-project development.

2.0 The service

2.1 Project inception

Our Discovery team will work with you to define the scope of the project. Depending on the current status of your project – Discovery, Alpha, Beta or Live – we will work with you to put the appropriate processes in place.

2.2 Project delivery

We will deliver the project in short SCRUM sprints – usually 3 weeks in length. Each week we will hold a project status call with your team, and provide a weekly written report on current progress, risks, issues and budget.

At agreed intervals we will hold “show and tell” sessions, where we present the current work to you.

2.3 Ongoing hosting, support and maintenance

These services are offered under separate G-Cloud listings.

2.4 Pricing

Work is billed on a time and materials basis, monthly in arrears, based on our current G-Cloud day rate.

2.5 Contracts and termination

Our standard terms and conditions are attached to this listing.
