1 Service Description

NCS-IT provides NHS Federated Data Platform/Foundry real-time data enablement services for Trusts and Integrated Care Systems, configuring and supporting an existing, proven integration product to securely produce near real-time data from NHS source systems to the **NHS Federated Data Platform**, enabling joined-up analytics through monitored, supported, standards-aligned data flows.

2 Features

- Configure existing proven product for FDP and Foundry integration
- Ongoing support for real-time NHS FDP data pipelines
- Secure data extraction from NHS source systems for FDP
- HL7, FHIR, API, CDC integration support for FDP
- Data validation and standardisation for FDP Foundry ingestion
- Monitoring, alerting, and incident management included for FDP flows
- Access control and security configuration aligned to NHS standards
- Change, release, and configuration management support for FDP flows
- FDP Documentation and knowledge transfer to NHS teams
- Scalable designs supporting Trust and ICS-wide deployments to FDP

3 Benefits

- Reduced operational risk through supported, proven integration capability
- Reliable near real-time data feeds into the NHS Federated Data Platform
- Reduced delivery FDP and operational risk using proven integration capability
- Joined-up analytics across organisations, pathways, and care settings with FDP
- Improved data quality through validated, standardised FDP pipelines
- Faster issue resolution through monitored and supported FDP services
- Clear operational ownership, support boundaries, and escalation routes
- Compliance with NHS security, governance, and information standards
- Scalable support model from Trust to ICS level
- Faster time to value using configurable existing products for FDP
- Foundation for future real-time and AI-driven analytics with FDP
