

Data and Analytics Innovation Support Service

ISSUE DATE: 30 January 2026

G-Cloud- 15 Service Definition

Data & Analytics Innovation Support Services

Innovative Data-driven Support

Solution Overview

We offer Digital, Technology and Data Innovation services to define policy and strategy, and to define, design, deliver and assure execution utilising Cloud environments and solutions. Helping organisations to unlock and maximise the true value of data, improving decision making, identifying new opportunities, driving innovation and reducing risk.

We offer end-to-end guidance, consultation, and support in response to your data challenge. We're experts in data, and we make no presumptions about your business or industry. We work in close partnership with your organisation to understand your specific objectives and challenges.

Discover

We begin your data journey by hosting a data discovery workshop. During the workshop, we'll explore the challenges facing your organisation and the ways by which data can help.

Design

Once we understand the specific challenges facing your organisation, we conduct user experience and design sessions to help us understand your existing processes and pain points in more detail.

Develop

Working in close partnership with your organisation, we begin development on a solution that meets your requirements. Our suite of market-tested IP enables us to develop robust, data analytics solutions quickly.

Deploy

Following knowledge transfer and training sessions, your solution is deployed via your preferred method, either on-premises or in the cloud.

Enhance

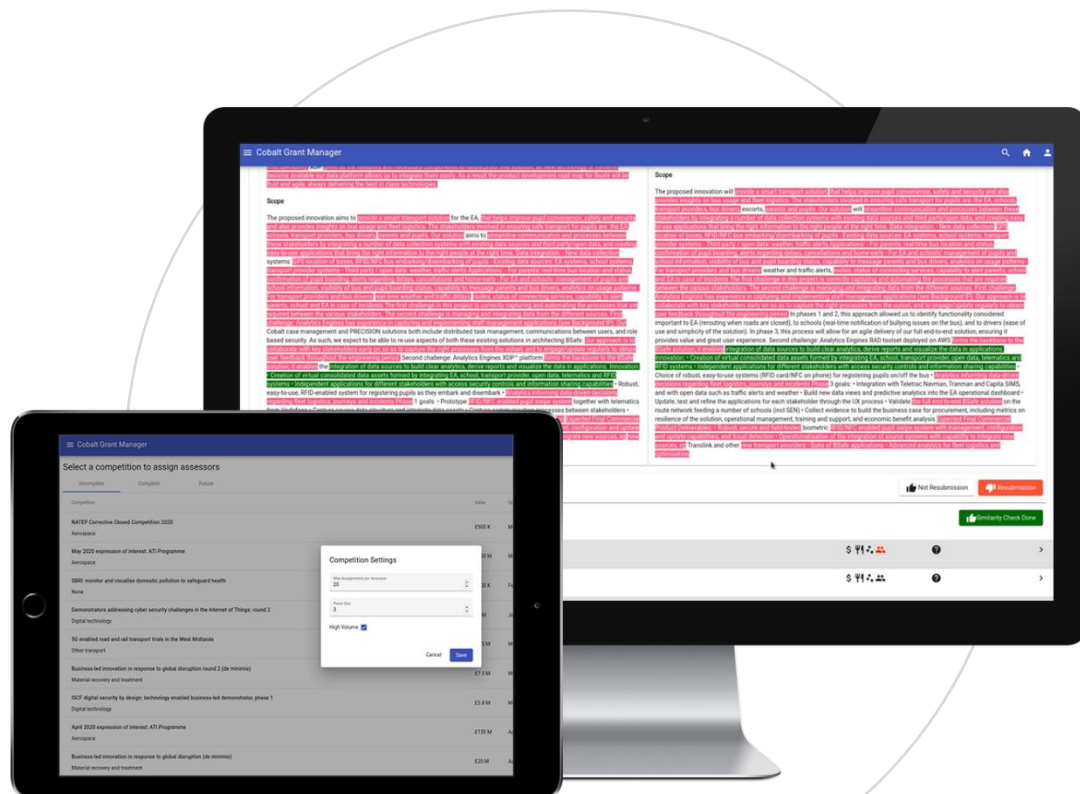

We continue to work in close partnership with your organisation, developing and enhancing the solution as your business needs evolve.

Service Features

Leadership and strategy for innovation and business transformation
 Innovation strategies for applications, data, security and integration
 Innovation approach compatible with Agile ways of working
 Innovation through Data-first approach
 Ideation generation workshops aligned to business vision, goals and objectives
 Rapid prototyping, showcasing and iterative development
 Business value propositions and business model canvassing
 Thought leadership, innovative thinking, new perspectives for knowledge sharing
 Structured approach to data modernisation across cloud & legacy infrastructures
 Utilise large language models (LLM) and AI safely and ethically

Service Benefits

Transform data into strategic assets
 Enhanced productivity with data automation, visualisation and collaboration
 Create innovation culture in organisation
 Data centric development ensures insights relevant to operational/business problem
 Operational benefits from integration and analysis of data sources
 Maximise learning while managing risk – testing new ideas
 Develop strategy for business and technical teams
 Ensure an insights-led and data-driven approach
 Improve process effectiveness and efficiency using AI and computer vision
 Use generative AI to improve service, efficiency and automate processes

Our Mission

To enable forward-thinking organisations to **unlock value** through Data & AI.

Analytics Engines offer end-to-end guidance, consultation and support in response to your **data challenge**.
