Public Sector Legacy Systems

PUBLIC

About PUBLIC

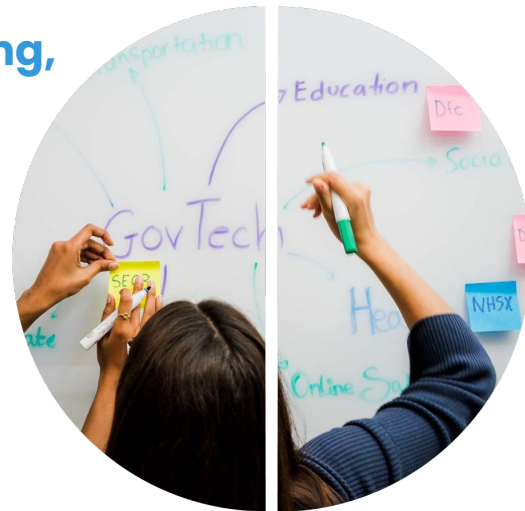

Our Mission | Why do we exist?

PUBLIC is a **digital transformation partner committed to helping the public sector turn innovative ideas into practical solutions.**

Our mission is to **help the public sector deliver outstanding, digitally-enabled services for citizens.**

We exist to help build a public sector that:

- Leverages **new technology to deliver better societal outcomes**
- Activates an **empowered, digitally-equipped workforce**
- Thrives on its own as an **innovation powerhouse** in its own right

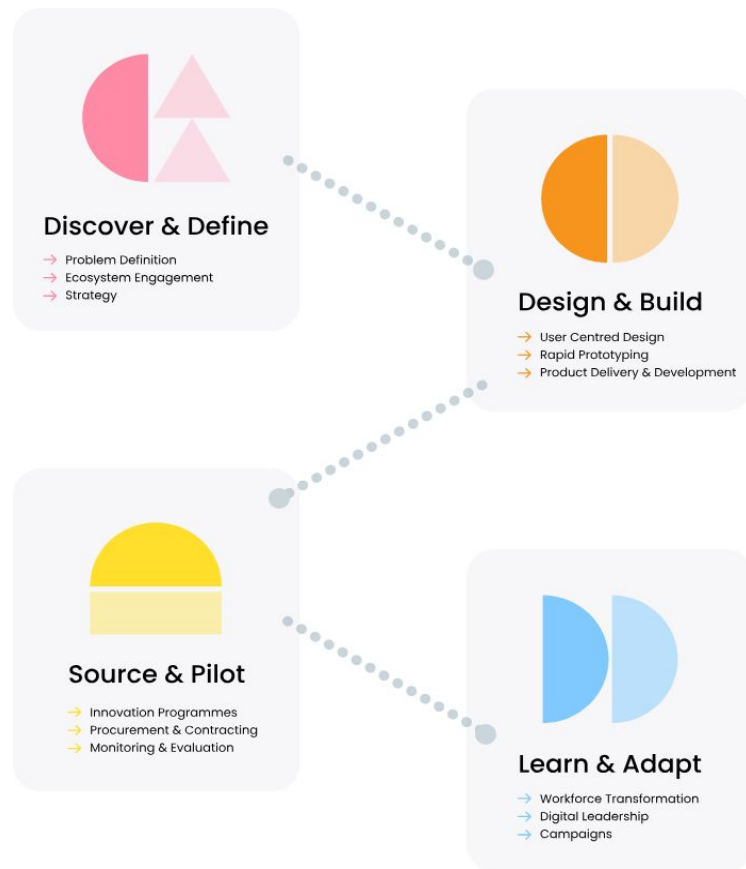

Our Approach | The transformation life cycle

We categorise the **digital transformation life cycle** into four distinct stages and we work with our clients to provide them with the specialist support, expertise and solutions they need at each stage.

This allows us to get our clients from **'What problems do we have?'** ...

...all the way to **'We have the technology, skills and organisational approach to solve existing and emerging problems in innovative ways'.**

Our Expertise | Where do we focus our work?

Our 6 Areas of Expertise built by deep experience, proprietary methodologies and proven success

Local Government

Digital & Data Strategies
Training for Officers & Members
Leadership & Technical Advisory
Spend Analysis & Benchmarking

Security & Online Safety

Digital Policy Advisory
Regulatory Design & Implementation
Digital Product Design
National Security Solutions

Digital, Data & Technology

DDaT Strategy & Transformation
Application & Platform Development
Data Science & Engineering
Responsible AI Advisory

Commercial, Spend & Impact

Finance & FinTech
Monitoring & Evaluation
Sustainability & Social Value

Open Innovation Programmes

Challenge Programmes
Startup Accelerators & Boot Camps
Innovation Grant Management
Startup Events & Engagement

Learning & Workforce Transformation

Learning-Oriented Discovery
Transformation Learning Programmes
Targeted Digital Upskilling
Executive Coaching & Placements

Our Team | Leadership

A team with unrivalled experience & expertise

Ryan Shea

Co-Managing Director

- 15 years of technology, strategy, and public sector expertise across both the US and UK
- Ex- Monitor Deloitte, London Business School MBA.

Johnny Hugill

Co-Managing Director

- 10+ years delivering digital transformation in the public sector
- Leader in public procurement and finance reform
- UK Government Procurement Expert Group - Member

Richard Llewellyn

Chief Technology Officer

- 10+ years of technical leadership, assurance, and advisory across the public sector
- Leader in scaling product teams in both startup and enterprise contexts

Cloud Solutions for Upgrading
Public Sector Legacy Systems

Cloud Solutions for Upgrading Public Sector Legacy Systems

PUBLIC's offering:

What: Our service for migrating legacy systems to the cloud is designed to transition critical public sector operations from on-premises servers to a cloud-based environment efficiently and securely. This includes setting clear project objectives, maintaining an inventory of systems for migration, identifying system owners, establishing current and future states for each system, and defining robust processes for execution. Our approach focuses on maintaining levels of service and minimising downtime during migration.

How: The key steps in our cloud migration methodology include:

1. **Objective Setting:** Define the goals of the migration, such as enhancing system security, scalability, and operational efficiency.
2. **System Assessment:** Maintain a list of systems and determine their readiness and suitability for migration based on their current state and operational importance.
3. **Stakeholder Engagement:** Identify and work closely with system owners and relevant teams, ensuring regular updates and buy-in throughout the migration process.
4. **Execution:** Implement clearly defined processes for each phase of the migration, from decommissioning and re-procuring to actual migration to cloud environments like AWS.

Why: Migrating legacy systems to the cloud is crucial for public sector organisations to overcome operational challenges associated with outdated infrastructure. It enhances security, increases scalability, improves cost efficiency, and ensures better integration with modern technologies. Additionally, cloud environments offer advanced security features, aiding in robust data protection and disaster recovery.

Potential Customers: All public sector entities that rely on legacy systems stand to benefit from our cloud migration services. This includes local councils, central government bodies, healthcare organisations, and educational institutions, regardless of size.

Cloud Solutions for Upgrading Public Sector Legacy Systems

Features:

- Our service is grounded in a deep understanding of public sector requirements and compliance standards.
- We ensure that all migrations meet stringent security and data protection guidelines
- Maintaining the integrity and confidentiality of sensitive information throughout the transition process.

Benefits:

- Clients benefit from a team who has deep experience working on digital, data, and technology in the public sector
- We help you migrate systems to modernised infrastructure that is secure, scalable, and cost-effective.
- Post-migration, organisations experience fewer system outages, reduced operational costs, and enhanced ability to integrate with new technologies.

How does it work

- **1. Initial Assessment:** We collaborate with client teams to outline the project scope, identify systems for migration, and define the desired future state for each system.
- **2. Detailed Planning:** Develop a comprehensive plan that outlines each step of the migration process, ensuring all stakeholders are informed and engaged.
- **3. Execution and Monitoring:** Carry out the migration according to the established plan, with continuous monitoring to manage risks and ensure compliance.
- **4. Post-Migration Support:** Provide ongoing support and training to ensure smooth transition to cloud technologies, including regular updates and system optimisations to maximise the benefits of cloud infrastructure.
- **Managing Transition and Integration:** To facilitate a smooth transition for employees and integrate new cloud technologies into daily operations, we provide thorough training and communication. This includes workshops, regular meetings, and detailed documentation, ensuring that all staff are confident in using the new systems and fully understand the changes.
