Subscription packages tailored to your organisation

Notes

All prices are exclusive of VAT.

All data is stored by FSW IT Solutions Limited on a secure server. Storage is subject to our usage, security and backup policy.

The above pricing option is based upon the stated number of bridge type structures the client wishes to manage with the system. Additional fees will apply if the number of bridges being managed increases beyond the stated range.

¹ Fees for additional users will be charged annually but you can add users and modules for the pro-rated difference at any time.

² Your data storage is shared between the photographs, documents and drawings you store against your structure inventory. The fees for additional storage are annual but you can upgrade storage plans for the pro-rated difference at any time.

³ Consultancy cost estimates (based on the hourly rates listed) for development, data management and training will be supplied following consultation with BridgeStation developers. Consultancy charges apply to the following activities: ad-hoc report generation, ad-hoc data management requests, meeting attendance by FSW IT Solutions Limited staff, software development and enhancement.

⁴ The price for introductory training is an estimate based upon one trainer running a one-day training session at the client's premises for up to 5 users; final price will depend on individual requirements. The fee includes preparation of a specific training site, and attendance of a BridgeStation trainer but does not include the hire of training facilities. Bespoke training and hosted training is also available. FSWIT will provide a quote for the training after consultation with the client.
