What is Ethernet Connect?

Our Ethernet Connect service is an enterprise class service with a choice of the last mile connectivity providers. Extensive peering improves service availability and service performance. All traffic to and from the enterprise network is carried over Neos Networks Ethernet backbone network to ensure instant access and high quality of service. This makes the service highly suitable for demanding real-time applications

Pricing Components

Ethernet Connect either Off Net (services terminate on a port on the EAD/Partner NTE) or On Net.

Off Net prices for Ethernet Fibre include the third-party tail as well as the Ethernet service.

On Net Ethernet prices comprise of the Ethernet service and there is an optional CAT-5 or an optical cable run from the Neos Networks node to the customer rack location where possible, or to the data centre “Meet me Room”.
