What is Managed Dedicated Internet Access?

Our Managed Dedicated Internet Access (MDIA) is our fully managed dedicated internet service. We install and manage the router, provide 24/7 monitoring and ensure reliable, secure and high-performance connectivity for customers with limited IT resources. This allows you to focus on your business while we take care of everything.

Pricing Components

MDIA can be purchased either Off Net (services terminate on a port on the EAD/Partner NTE) or On Net.

Off Net prices for MDIA include the third-party tail, the Ethernet service, the MDIA element and a managed router.

On Net MDIA prices comprise of the Managed Direct Internet Access service, a managed router and there is an optional CAT-5 or an optical cable run from the Neos Networks node to the customer rack location where possible, or to the data centre "Meet me Room".
