

Data management

Lot 3: Cloud Support

Features

- Gather data from multiple sources and combined into unified view
- Ensure completeness, consistency, and accuracy of data before analysis
- Design structured, secure data sources for easy retrieval and analysis
- Develop clear data governance and supporting documentation
- Align data management and governance with regulatory frameworks
- Design and enable structured reporting for monitoring and measurement
- Transform raw data into human-readable and visualised data sets
- Develop automation and workflow optimisation for data tasks
- Provide user training and knowledge transfer for confident use of data assets
- On-going advice and guidance for continuous improvement in data practices

Benefits

- Reduce errors and conflicting information through validated, standardised data
- Improve speed and quality of decision-making through a solid evidence base
- Reduce costs and manual work through automation of repetitive data tasks
- Improve visibility of operations through integrated, unified data
- Reduce risk of data loss or compromise through improved data handling and controls
- Improve business performance with consistent metrics and monitoring
- Increase scalability of business activity with well-designed data management
- Increase compliance, including regulatory, with documentation and processes
- Support staff professional growth around data literacy and confidence
- More easily identify patterns, risks, and opportunities that affect the organisation

About Hand & Millar

Hand & Millar Management Consulting is a dynamic and energetic enterprise committed to delivering high-quality management consulting services across both public and private sectors. With a strong foundation in integrity, loyalty, and partnership, we are dedicated to helping clients achieve their strategic goals through tailored solutions and expert guidance.

By ensuring we put our clients' needs at the heart of everything we do, our experienced and empathetic consultants provide proportionate, tailored and implementable project delivery capabilities into client teams to help their organisation succeed.

Our purpose

Our purpose is to create the best possible future for the individuals, teams and organisations we work with through the broad range of services that we offer public sector organisations.

Hand and Millar Management Consulting believes in doing things differently by seeing things differently. We tailor our approach and methodologies to meet the specific needs of each client, ensuring practical, results-driven solutions that foster long-term success.

Our core values

We care passionately about delivering value into the public sector. This is because we are consumers of many public sector services ourselves, but also because that is where we have come from. Our Partners have both worked within the Civil Service, as have many of our employees and associates. Our 3 core values reflect this dedication and experience:

Listening as Leadership: We make space for voices to be heard, perspectives to be shared, and meaning to be discovered.

Trust through Empathy: We seek first to understand not just what's said, but what's felt. We approach every challenge with a genuine desire to uncover what matters most to people.

Presence with Purpose: We're fully engaged with our clients and each other. Whether in a moment of challenge or clarity, we remain attentive and guided by the "why."
