

G-Cloud 15 Service Description

Qlik Talend Cloud

Qlik Talend Cloud

Qlik Talend Cloud accelerates the discovery and availability of analytics-ready data by automating real-time data streaming, refinement, cataloguing and publishing. It enables DataOps and drives agility in the analytics process through automated data pipelines (ETL/ELT) that stream from transactional systems, warehouses, or data lakes to create actionable data on-demand.

Service Features

1. Log-based change data capture (CDC) for real-time and batch integration
2. Broad connectivity across cloud, SaaS, enterprise, and legacy systems
3. Automated ETL, ELT, and streaming data pipeline orchestration
4. Cloud-native replication to warehouses, lakes, and lakehouses
5. Embedded data quality checks within integration workflows
6. Centralised metadata, lineage, and impact analysis
7. Automated Apache Iceberg table management and compaction
8. Secure data masking and policy-driven data protection
9. Governed data product creation and reuse
10. Integration pipelines designed for analytics and AI workloads

Service Benefits

1. Integration pipelines designed for analytics and AI workloads
2. Reduced complexity across diverse enterprise data environments
3. Reliable, analytics-ready data delivered consistently at scale
4. Lower operational risk through automated validation and controls
5. Optimised lakehouse performance without manual engineering effort
6. Flexibility to adopt open, cloud-agnostic data architectures
7. Improved compliance through embedded security and data protection
8. Faster onboarding of new data sources and use cases
9. Strong foundation for advanced analytics and AI initiatives
10. Lower long-term costs through standardised, automated integration

Qlik Talend Cloud is provided as a secure, scalable cloud software service for data integration and DataOps. Ometis supports onboarding, configuration, and enablement to ensure effective adoption and value realisation, aligned to buyer requirements and the G-Cloud call-off agreement.

25 years experience

250+ UK customers

Vendor-agnostic approach

Delivery Approach:

Services are delivered using a simple, structured approach:

1

Understand

Confirm buyer objectives, source and target systems, data integration requirements, security constraints, and deployment preferences to ensure appropriate platform configuration.

2

Deliver

Provision and configure Qlik Talend Cloud to enable automated data ingestion, replication, transformation, and delivery across cloud, hybrid, and on-premise environments.

3

Assure

Confirm platform availability, security controls, governance configuration, and data pipeline operation. Support adoption through agreed onboarding and knowledge transfer activities.

Service Scope

Included

- Access to the Qlik Talend Cloud data integration software platform
- Automated data ingestion, replication, and transformation pipelines
- Log-based change data capture (CDC) for real-time and batch workloads
- Integration across cloud, hybrid, and on-premise source systems
- Support for data lakes, cloud data warehouses, and analytics platforms
- Data quality, masking, and governance capabilities
- Secure, scalable DataOps platform with role-based access controls
- Basic Support

Excluded

- Data engineering or pipeline development services (available separately under Lot 3)
- Data platform migration delivery (available separately under Lot 3)
- Long-term managed services or operational support (unless separately procured)
- Analytics application development or BI delivery (available separately under Lot 3)
- End-user training beyond standard onboarding (available separately under Lot 3)
- Ongoing support beyond Basic (available separately under Lot 3)

Service Constraints

The service is delivered as a cloud-based software platform. Buyers must have compatible source and target systems and appropriate network connectivity. Onsite services are not required for software provision.

Security and Compliance

Qlik Talend Cloud is delivered in line with G-Cloud framework requirements and industry security standards. Data masking, governance, and access controls are configurable. Buyer-specific security or data handling requirements are agreed at call-off.

Ordering and Onboarding

The service is ordered via a G-Cloud call-off agreement. During onboarding, Ometis supports tenant setup, connector configuration, and initial pipeline enablement as agreed.

Service Management

The software platform is maintained and updated by Qlik. Ometis provides agreed service management activities related to onboarding, configuration, adoption and basic support. Service completion is confirmed once access and configuration are established. Service delivery is managed through agreed points of contact and delivery plans. Progress is monitored throughout the engagement, and completion is confirmed following delivery of agreed outputs and knowledge transfer.

25 years experience

250+ UK customers

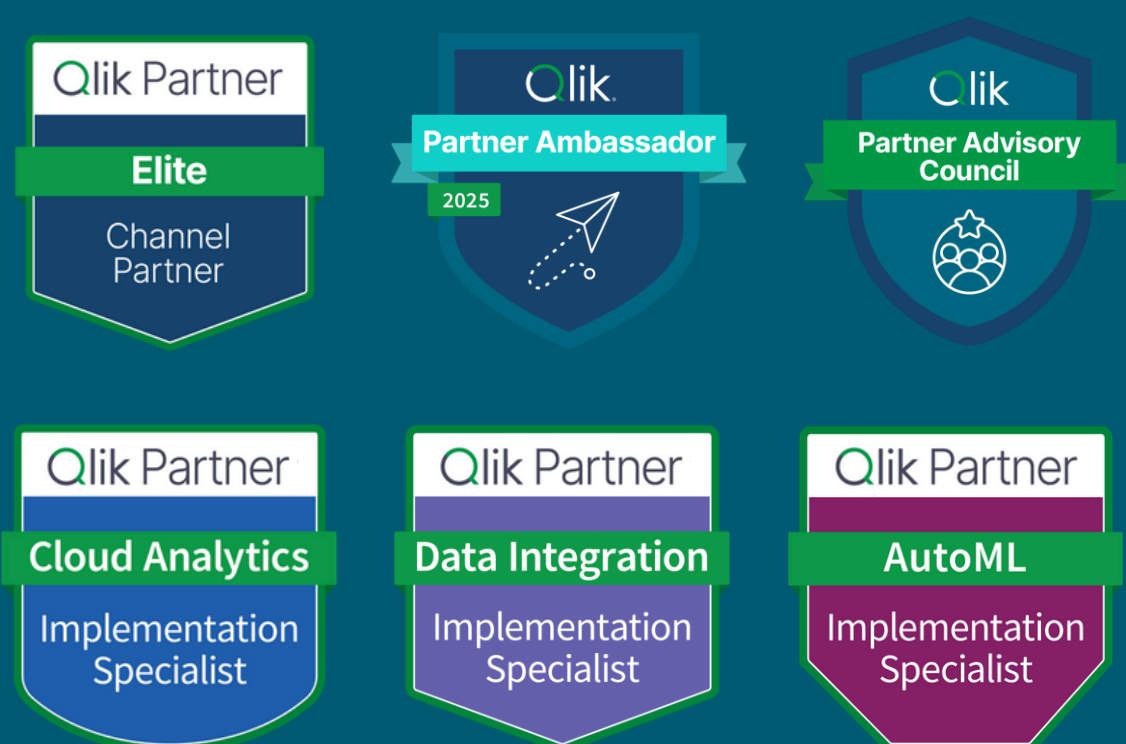

Vendor-agnostic approach

We are the UK's largest Qlik consultancy

We provide organisations with the insight and tools they need to unlock the full potential of their data and make more informed business decisions.

Our team of consultants is one of the most experienced in the Qlik partner channel. They will provide best-practice advice whilst configuring the software to your specific requirements.

We have delivered multiple Snowflake projects across our customer base and continue to work on the latest features within that product.

- ✓ Ometis is an authorised reseller and delivery partner of Qlik.
- ✓ The cloud software provided under this Lot 2b service is Qlik software, and all relevant product accreditations and certifications are held by Qlik as the technology provider.
- ✓ Ometis is contractually authorised to resell, implement, and support Qlik software and acts as the contracting supplier for this G-Cloud service.

WHAT WE DO

25 years experience

250+ UK customers

Vendor-agnostic approach

Our Proven Process balances strategic planning, practical delivery and continuous improvement.

It's based on 25 years delivering data solutions for 250+ UK customers and tailored to your needs.

1

Understand "Define the journey"

Before any delivery begins, we listen to your goals and challenges, understand how your data, systems, and teams work, and align everyone on what success looks like.

This ensures we're solving the right problem.

2

Deliver "Govern the work"

We design and build solutions that fit your needs and constraints, keeping delivery controlled and transparent throughout.

Training and adoption support are built in, so your teams understand and use what's being delivered.

3

Assure "Realise the value"

We review what's been built against your original goals and make sure the solution is stable, secure and understood.

Whether you continue independently or with our ongoing support, you're in a strong position to maintain and improve it.
