On-demand Security Expertise

A subscription to The Synack Platform is required for all product offerings. Both the product price and credit unit cost are shown for each of the products. The credit unit price is £110.

The Synack Platform

Product	Duration	Description	Price/ Credits
Synack Platform Subscription	1 year	Gain a one-year subscription to the Synack Platform. This subscription includes a one-month period of weekly Attack Surface Discovery for new assets. The subscription also provides a comprehensive asset inventory, captures all testing data, and offers tools to track remediation, evaluate pentesting coverage, and generate audit-ready reports. Patch verification for all vulnerabilities is included. See a detailed breakdown of features here: https://www.synack.com/product-offering/	£16,000
Continuous Attack Surface Discovery Add-On	1 year	An annual contract for continuous external attack surface discovery. This solution includes weekly discovery of new assets, allowing organizations to maintain an up-to-date inventory and improve their security posture by finding and addressing unknown, internet-facing assets. The service integrates with Synack's PTaaS platform, creating an easy way to take action and pentest newly discovered assets.	£44,000/ 400
Managed Vulnerability Disclosure Program Add-On	1 year	A managed VDP offering for security teams with a limit of 200 vulnerability submissions per year. This service includes vulnerability triage, remediation guidance, researcher recognition, and reporting data. Each additional submission after the annual limit is 1 credit. The program leverages a vetted community of security researchers to provide a safe and legal way for enterprises to be notified of vulnerabilities.	£44,000/ 400

Synack Penetration Testing

Synack offers a better way to pentest. Compared to traditional pentesting models, Synack provides more scalability, agility, and an on-demand approach that keeps pace with today's modern development needs. The Synack Credits required for each service are dependent on scoping.

Pentesting Engagement	Duration - Research or Time on Target	Asset	Description	Price/ Credits
Synack365	1 year	Web, or Mobile or Host	Synack 365 is a continuous pentest that harnesses the Synack Red Team and SmartScan in a single, on-demand security testing platform. Customers typically leverage continuous testing for their “crown jewels” or dynamic cloud assets. Synack 365 includes a number of differentiating features, including: continuous human testing 365 days of the year, incentive-driven vulnerability discovery that mimics a real attack, real-time reporting, audit-ready reports, targeted testing for compliance, vulnerability triage, risk scores, patch verification, an API and integrations. A Synack test can cover one of the following scope types: 1. 1x Web Application Authenticated or upto 4 simple apps, such as static pages or single-page applications with minimal to no dynamism. 2. 50x Web Application Unauthenticated (no authenticated testing) 3. 250x Infrastructure IPs Unauthenticated 4. Android/iOS Mobile Application testing (Authenticated and unauthenticated)	£136,400/ 1240

Synack365 (mobile add-on)	1 year	Mobile add-on	Synack 365 is a continuous pentest that harnesses the Synack Red Team and SmartScan in a single, on-demand security testing platform. Customers typically leverage continuous testing for their “crown jewels” or dynamic cloud assets. Synack 365 includes a number of differentiating features, including: continuous human testing 365 days of the year, incentive-driven vulnerability discovery that mimics a real attack, real-time reporting, audit-ready reports, targeted testing for compliance, vulnerability triage, risk scores, patch verification, an API and integrations. Mobile add-on (if existing web test is active that shares back end) is at a reduced	£44,000/ 400

Synack14	2 Weeks	Web, Mobile, Host	Synack14 is a 14-day pentest that harnesses the Synack Red Team and SmartScan in a single, on-demand security testing platform. Customers typically use Synack14 to test a wide range of assets using an unstructured testing methodology that mimics a real attack. Synack14 includes a number of differentiating features, including: incentive-driven vulnerability discovery that mimics a real attack, real-time reporting, vulnerability triage, patch verification, and program and researcher management. A Synack test can cover one of the following scope types: 5. 1x Web Application Authenticated or upto 4 simple apps, such as static pages or single-page applications with minimal to no dynamism. 6. 50x Web Application Unauthenticated (no authenticated testing) 7. 250x Infrastructure IPs Unauthenticated 8. Android/iOS Mobile Application testing (Authenticated and unauthenticated)	£26,400/ 240
Synack14 (mobile add-on)	2 Weeks	Mobile add-on	Synack14 is a 14-day pentest that harnesses the Synack Red Team and SmartScan in a single, on-demand security testing platform. Customers typically use Synack14 to test a wide range of assets using an unstructured testing methodology that mimics a real attack. Synack14 includes a number of differentiating features, including: incentive-driven vulnerability discovery that mimics a real attack, real-time reporting, vulnerability triage, patch verification, and program and researcher management. Mobile add-on (if existing web test is active that shares back end) is at a reduced cost of 80 credits.	80/ £8,800

API Pentest (Headless)	2 Weeks	API	Synack researchers will test headless API endpoints from an adversarial perspective and produce writeups that document the work performed, providing proof-of-coverage. Coverage can be viewed on the platform, or exported to PDF for sharing with auditors or other audiences. When exploitable vulnerabilities are found, they are shared in-platform through Synack's vulnerability management workflow. Up to 25 endpoints included. The scope can be expanded as needed with Synack's 10 endpoint add-on pack, which costs 100 credits. Only one API should be used with each package, multiple APIs cannot be combined into one.	£26,400/ 240
API Pentest (Headless add-on)	2 Weeks	API	The scope for APIs Pentests can be expanded as needed with Synack's 10 endpoint add-on pack.	£11,100/ 100
SynackST+	5-10 days	Web or Host	A SynackST+ (Standard Test Plus) is a compliance-focused pentest performed by a single SRT over a 5 to 10 day assessment window. It incorporates guided vulnerability and controls testing and does not include testing from a pool of SRT like Synack14. SynackST+ is intended for risk assessment on a medium to large web or host asset(s). The scope of each test may include: 50 unauthenticated web apps, 1 authenticated web app, or 250 host Assets ST+ Host 251-500 and ST+ H They are risk assessments performed by a single SRT over a 5 to 10 day assessment window.	£10,010/ 91

SynackST	5 days	Web or Host	A SynackST (Standard Test) is a compliance-focused pentest performed by a single SRT over a 5 day assessment window. It incorporates guided vulnerability and controls testing and does not include testing from a pool of SRT like Synack14. SynackST is intended for risk assessment on a small web or host asset(s). The scope of each test may include: 25 unauthenticated web apps, 1 small authenticated web app, or 100 host assets.	£16,720/ 152
