

# MANAGED SECURITY OPERATIONS CENTRE

Enterprise level threat detection,  
without the corporate price tag.

Costing UK companies up to £30 bn year, cyber-crime is constantly evolving, because as quickly as new technologies emerge, cyber-criminals figure out new ways to exploit them. So, in an ever-evolving digital environment, how can you ensure you secure and protect your organisation, its valuable data and employees?

At Stripe OLT, we know the first hurdle is your cloud infrastructure, and as a Microsoft Gold Partner, we have the experience and expertise required to protect your business and its reputation.

By employing an up to date understanding of the threat landscape, alongside defensive and offensive remediation measures we can protect your business, empower your people and combat the ever increasing cyber threats your business may face.

## WHO IS IT FOR?

Our professional managed security services are there for organisations that share large quantities of sensitive data both internally and externally, have multiple office locations or remote users and require total visibility and security throughout their estate.

## HOW DOES IT WORK?

Stripe OLT's dedicated security operations department leverage cutting-edge Microsoft detection technology and artificial cyber intelligence, to offer an unparalleled outsourced SOC service.

We use the NCSC policy framework and our own set of Microsoft security tools, to ensure your cloud and on-premise environments follow cyber security best practice recommendations and crucial security policies to proactively prevent potential threats.

### Detect and Prevent

By utilising hybrid technologies, alongside Microsoft's Advanced Threat Protection, Stripe OLT's security experts are able to proactively monitor and protect your users and systems 24/7. From endpoint detection and response, such as patch management and network protection, to enforced ransomware mitigation, like firewall alerts and leaked credential monitoring, Stripe OLT are equipped to provide a fully managed security solution that will defend and protect your business and proactively prevent potential threats.

### Respond and Investigate

We know security goes beyond detection and prevention, and unlike many other dedicated SOC departments, we believe in investigation and user-education as a means of prevention. Understanding how and why an incident has occurred is imperative to stopping future attacks. By knowing the ways in which your business systems, network and processes work, we are able to provide a direct, managed and informed response that will limit damage and endeavor to prevent the exposure of your valuable data.

### Report

A crucial element of any support service is visibility so consequently, monthly reports are also included in our SOC service. Not only will you receive details on external threat intel and recent trends, we'll also update you on any internal suspicious activity, users and blocked content. Alongside this you can also opt to receive quarterly strategic meetings, to keep you up-to-date and ahead of the game.

## WHAT DOES IT COST

Our managed security plans are tailored to suit the needs of each individual business, and are based on a per user, per site basis.

## ACCREDITED PARTNER

### Microsoft - Gold Certified Cloud Partner

Our Microsoft Gold-Certified cloud consultants have direct access to the latest Microsoft training, qualifications and tools; which means our workforce are not only experts in their field, but are equipped to deliver and implement industry leading secure, cloud technologies.

### CREST - Penetration Testing Certified

In achieving this globally recognised accreditation, we've positioned ourselves as a leading provider of penetration testing services. In undertaking these stringent assessments we have demonstrated that our business processes, data security and testing methodologies meet the highest standards.

### Cyber Essentials PLUS - NCSC Certified

In gaining this practitioner status, our team of experts are ideally placed to support clients with their own accreditation journey, whilst additionally giving our partners the confidence in knowing that we are fully equipped to provide holistic protection across their systems.

### GCHQ - Cyber Security Training Certified

At Stripe OLT, the APMG Accredited Trainer status has been achieved for both offensive and defensive cyber security, which means we can deliver robust training courses, focussing on Incident Response, Digital Forensics, Managed Alerting and Penetration Testing.

## KEY BENEFITS

### Expert Support

Your business will receive support from an allocated team of GCHQ certified security experts, dedicated to your business's Cyber Security posture.

Feel assured knowing your Cyber Security partner has been Cyber Essentials PLUS certified, and will be following Government best practices.

### Prevention Through Education

Your employees are your first line of defense, so our dedicated team will help you foster a cyber first culture, through preventative education. Working alongside your workforce, we will build your users knowledge, even staging internal attacks to ensure your employees are equipped at the first sight of danger.

### Identify Threats in Real Time

We are able to protect you across your complete business environment; on-premise, cloud and hybrid.

Our industry-leading experts are equipped to continuously monitor your systems, 24/7, to identify threats in real-time.

### Tailored Security Plans

Your business will reduce the total cost of ownership by establishing an external SOC department.

At Stripe OLT we know there is no 'one-size-fits-all' security solution, so we offer tailored plans, to suit your business's individual needs and requirements.

## ADDITIONAL CYBER SECURITY SERVICES

### Penetration Testing Services

Through robust penetration testing, our SecOps team will help you understand and discover any weaknesses in your business systems, allowing you to take appropriate remedial action where required.

### Threat Intelligence

Our threat intelligence solutions gather raw data about emerging and existing threats, both internally and externally, helping you identify possible weaknesses, such as leaked credentials or newly identified exploits. In doing this we can help you prepare, prevent, and identify the threats that could take advantage of your valuable resources.

### Vulnerability Assessments

At Stripe OLT, we will help you define, identify and classify vulnerabilities in your computer systems, applications and network infrastructures.

### Gap Analysis

In undertaking a Cyber Security Gap Analysis our security experts will help you determine the difference or 'gap' between your organisation's current and ideal state of business technology security.
