Service Overview

Microsoft SharePoint is a secure, cloud-based platform for collaboration, document management, and intranet solutions. It enables teams to store, organise, and share content seamlessly, with robust version control and access permissions. Integrated with Microsoft 365, SharePoint supports workflows, automation, and integration with tools like Teams and Power Automate. Accessible via web and mobile, it enhances productivity through centralised content management and enterprise-grade security. SharePoint is ideal for creating portals, managing documents, and fostering collaboration across organisations.

Features

- Sharing information within an organisation with shared document/meeting workspaces
- Cross device availability, access and interact with SharePoint newsfeed
- Powerful, fast and effective search engine

Benefits

- Improve internal communication
- Centralise information
- Agility to scale and adapt to changing business conditions
- Automatic software patching reduces maintenance time and effort

Outcomes For Our Customers

Increased Cost Saving

Increased Efficiencies

Improved Security Posture
