

Policy Analysis Platform Powered by Generative AI

Enhanced Policy Analysis with Generative AI for smarter public sector governance

Cloud-native policy evaluation, scenario simulation and decision-support for government teams

Better policy decisions

Improved policy decision-making through data-driven insights and AI-generated recommendations.

Faster analysis

Increased efficiency in analysing complex policies and scenarios, reducing time to insight.

More accurate forecasting

Enhanced accuracy in predicting potential outcomes and impacts of policy options.

Transform Public Services

- Purpose-built for government and public sector policy analysis, aligned with G-Cloud requirements.
- Combines cutting-edge generative AI with scenario simulation for robust, evidence-based decision support.
- Offers a user-friendly, accessible web interface with mobile-optimised experience and customisation options.
- Delivers real-time analytics, dashboards and metrics to monitor usage, performance and outcomes.

Service Overview

This service is a cloud-based policy analysis platform that uses generative AI to transform how government and public sector teams evaluate, design and refine policies. It enables users to analyse complex policy problems, simulate alternative scenarios, forecast outcomes and surface actionable, data-backed recommendations via intuitive dashboards and reports.

Core Capabilities

- Analyse complex policy challenges with advanced AI models and rich data integration.
- Simulate multiple policy scenarios and forecast potential outcomes based on configurable parameters.
- Provide data-backed policy suggestions via real-time analytics, dashboards and reporting.

Key Features

Cutting-edge generative AI integration

Tailored to policy analysis use cases for advanced insights and recommendations.

Advanced capability to dissect and interpret

Complex policy documents and datasets with precision and depth.

Scenario simulation engine

Driven by user-defined data inputs and assumptions for robust forecasting.

Insightful, data-backed policy recommendations

Presented through visual dashboards for clear decision-making.

Comprehensive analysis and interpretation tools

For policies and their impacts across stakeholders and systems.

User-friendly, web-based interface

Accessible via major browsers and mobile devices for on-the-go access.

Customisable parameters, dashboards and reports

For organisation-specific needs and workflows.

Real-time analytics

For up-to-date insights on policy performance and outcomes.

Service Benefits

Better policy decisions

Improved policy decision-making through data-driven insights and AI-generated recommendations.

Faster analysis

Increased efficiency in analysing complex policies and scenarios, reducing time to insight.

More accurate forecasting

Enhanced accuracy in predicting potential outcomes and impacts of policy options.

Deeper impact understanding

Better understanding of how different policy options affect stakeholders and systems.

Stronger collaboration and transparency

Empowered stakeholders with informed opinions, streamlined workflows and increased transparency in decision-making.

Summary & Key Advantages

Why Choose This Service

- Purpose-built for government and public sector policy analysis, aligned with G-Cloud requirements.
- Combines cutting-edge generative AI with scenario simulation for robust, evidence-based decision support.
- Offers a user-friendly, accessible web interface with mobile-optimised experience and customisation options.
- Delivers real-time analytics, dashboards and metrics to monitor usage, performance and outcomes.
- Supports multi-cloud deployment (public, private, community, hybrid) with strong security, resilience and governance controls.
- Backed by structured onboarding, documentation and tiered support to help teams realise value quickly.
