

AI Video Analytics for Public Safety, Compliance and Crowd Management

Intelligent video analytics SaaS for UK public sector

Real-time AI monitoring for security and compliance

Enhanced Public Safety

Rapid identification of security threats through AI monitoring.

Faster Incident Response

Automated alerts and notifications reduce response times.

Regulatory Compliance

Meets surveillance regulations and data protection laws like GDPR.

Transform Public Services

- Proven integration with UK public sector CCTV and security systems
- Multi-cloud flexibility for public, private, hybrid, or on-premises use
- Full GDPR and UK surveillance compliance with data sovereignty in UK/EEA
- Scalable for high-volume feeds across police, councils, and transport

Service Overview

Intelligent video analytics SaaS delivers real-time monitoring for public safety, compliance, and crowd management in the UK public sector. AI-powered systems support police, councils, transport authorities, and emergency services by detecting threats, analyzing crowds, and monitoring behavior. The service enhances security operations, speeds incident response, and ensures regulatory compliance while protecting citizens.

Core Capabilities

- Real-time AI threat and anomaly detection
- Automated crowd density and behavior analysis
- Secure GDPR-compliant video storage and integration

Key Features

Real-time video monitoring with AI-powered threat and anomaly detection

Advanced AI continuously monitors video feeds to identify security threats, unusual behavior patterns, and anomalies in real-time.

Automated crowd density analysis and behaviour pattern recognition systems

Intelligent systems analyze crowd movements, density levels, and behavioral patterns to

Secure GDPR-compliant video storage with encrypted data transmission protocols

All video data is stored securely with end-to-end encryption, meeting GDPR requirements and

Multi-cloud deployment supporting public, private, hybrid, and on-premises infrastructure

Flexible deployment options allow organizations to choose cloud, on-premises, or hybrid

Integration with existing CCTV infrastructure and government security systems

Seamlessly connects with existing CCTV networks and security platforms without requiring

Scalable processing for high-volume video feeds across multiple locations

Handles large-scale video processing across multiple sites with automatic scaling to meet demand.

Role-based access controls ensuring data protection for law enforcement

Granular access controls restrict video access based on roles, ensuring only authorized personnel can view sensitive footage.

UK Government Cyber Essentials certified with surveillance compliance standards

Certified to UK Government security standards including Cyber Essentials and surveillance

Service Benefits

Enhanced Public Safety

Rapid identification of security threats through AI monitoring.

Faster Incident Response

Automated alerts and notifications reduce response times.

Regulatory Compliance

Meets surveillance regulations and data protection laws like GDPR.

Cost Reduction

Lowers expenses by minimizing manual video monitoring needs.

Evidence Collection

Provides secure video archives for investigations.

Summary & Key Advantages

Why Choose This Service

- Proven integration with UK public sector CCTV and security systems
