- Deep integration capabilities with existing case management, HRM, and line-of-business systems via REST

Service Overview

Kanbanian helps public sector teams streamline digital transformation by automating project workflows, centralising task management, and surfacing real-time insights across programmes and departments. It is delivered as a secure, browser-based SaaS platform with UK/EEA data hosting, multi-cloud deployment options, and strong access controls tailored to government compliance needs. AI-powered analytics, dashboards, and integrations support faster decision-making, better reporting, and improved cr...

Core Capabilities

- AI-assisted project and task tracking for government and council teams
- Real-time dashboards and reporting across projects, milestones, and workloads
- Secure, UK/EEA-hosted platform with advanced access controls and audit trails

Key Features

Automated project tracking

Intelligent project and task tracking workflows optimised for government teams and multi-departmental programmes

Secure UK data storage

Sensitive public sector project information hosted exclusively in UK/EEA datacentres with advanced encryption

Real-time analytics dashboards

Dynamic dashboards surfacing key metrics, milestones, and workload insights at project and portfolio levels

System integrations

Deep integration with case management, HRM, and departmental systems via secure REST APIs

Customisable notifications

Flexible alerts and notifications aligned to government policy, governance, and escalation requirements

Multi-user collaboration

Purpose-built tools for cross-departmental and cross-council teams to collaborate securely in real-time

Mobile-responsive interface

Fully responsive web interface supporting all major UK browsers and devices for on-the-go access

Advanced access controls

Comprehensive role-based access controls with full audit trails for compliance and accountability

Service Benefits

Reduced admin overhead

Cuts manual project administration and frees frontline and policy staff to focus on delivery

Faster reporting and analysis

Speeds up public sector reporting cycles and policy analysis with AI-driven insights and ready-made dashboards

Greater transparency and compliance

Provides clear audit trails, activity logs, and reporting to support government audit and regulatory requirements

Improved cross-team collaboration

Enhances communication and coordination across departments, councils, and multidisciplinary teams

Cost and efficiency gains

Automates repetitive administration and workflows, reducing duplication and operational costs

Summary & Key Advantages

Why Choose This Service

- Purpose-built for UK public sector transformation, aligned with UK data regulations and government standards
- Secure, multi-cloud SaaS with UK/EEA hosting, strong encryption, and independently tested datacentre security
- AI-driven insights, dashboards, and metrics to improve decision-making and policy delivery outcomes
- Deep integration capabilities with existing case management, HRM, and line-of-business systems via REST APIs
- Flexible customisation including dashboards, reports, workflows, and access controls per organisation
- Structured onboarding, documentation, and tiered support to get teams productive quickly and maintain reliability
