Transform Public Services

- Purpose-built for UK public sector digital transformation, including government, NHS, councils, and education
- Combines real-time KPIs, benchmarking, and predictive analytics in a single secure cloud platform
- Directly supports compliance with Government Digital Service and broader UK digital standards
- Integrates with existing government platforms, ERP, project tools, and BI suites to maximise current

Service Overview

This is a cloud-based KPI benchmarking platform designed for UK public sector digital transformation programmes, including government agencies, NHS, councils, and education bodies. It enables organisations to track key performance metrics, compare against sector standards, and turn data into actionable insights to support data-driven decisions, improved service delivery, compliance, and better return on digital investments.

Core Capabilities

- Real-time tracking of digital transformation KPIs across departments and initiatives
- Benchmarking against UK public sector standards and best practices to highlight performance gaps
- Automated analytics and reporting on transformation progress and outcomes

Key Features

Real-time KPI tracking with customisable dashboards for digital initiatives

Track performance metrics in real-time with customisable dashboards tailored to your transformation programmes.

Benchmarking against UK public sector standards and best practices

Compare your performance against sector standards and identify areas for improvement.

Automated reporting and analytics for transformation progress measurement

Generate automated reports and analytics to measure and communicate transformation

Multi-departmental data integration from existing government systems and sources

Integrate data from multiple departments and existing systems for a unified view.

Compliance monitoring aligned with Government Digital Service and UK public sector standards

Monitor compliance with GDS standards and public sector best practices.

Secure cloud platform with role-based access control and MFA authentication

Enterprise-grade security with role-based access and multi-factor authentication.

Predictive analytics and trend forecasting for strategic planning

Use AI-powered analytics to forecast trends and inform strategic decisions.

Connectivity options for integration with ERP, project tools, BI suites, and other platforms

Connect seamlessly with existing enterprise tools and platforms.

Service Benefits
