

Automated Public Records & Archives Digitisation SaaS for Government

AI-powered digitisation and search for public records, archives, and heritage documents

Secure, compliant cloud platform for UK public sector archives and local authorities

Faster public access

Speeds up public and researcher access to historical archives and heritage information across the UK.

Reduced storage costs

Cuts physical storage costs while helping preserve the condition of original archive materials.

Improved FOI compliance

Enhances Freedom of Information responses by making records rapidly searchable and retrievable.

Transform Public Services

- Purpose-built for UK public sector archives, libraries, heritage organisations, and local authorities.
- Combines AI-powered OCR, metadata automation, and secure multi-cloud storage in a single SaaS platform.
- Accelerates digitisation projects at scale with batch processing and quality control tooling.
- Strengthens compliance with GDPR, FOI, and government security and data residency requirements.

Service Overview

Automated Public Records & Archives Digitisation SaaS converts physical public records, archives, and heritage documents into secure, searchable digital formats for UK public sector organisations and local authorities. It uses AI-powered OCR, automated metadata tagging, and secure cloud storage integrated with government frameworks to accelerate digital transformation while supporting data protection and Freedom of Information obligations.

Core Capabilities

- AI-powered OCR to convert historical and archival documents into searchable digital text
- Automated metadata extraction for dates, names, locations and archival attributes
- Secure multi-cloud deployment with compliant storage in the UK/EEA and GDPR-aligned workflows

Key Features

AI-powered OCR for historical and archival documents

Advanced optical character recognition technology specifically tuned for historical documents and varied archival formats.

Automated metadata tagging for dates, names, locations and other archive fields

Intelligent extraction and tagging of key archival metadata to enhance discoverability and cataloguing.

Secure cloud storage for long-term preservation of digitised public records

Enterprise-grade cloud storage with UK/EEA data residency and long-term digital preservation capabilities.

High-volume batch processing for rapid digitisation of thousands of pages

Scalable processing infrastructure to handle large-scale digitisation projects efficiently.

Quality control dashboard for digitisation accuracy and processing status monitoring

Real-time monitoring and quality assurance tools to ensure high accuracy and track project progress.

Integration with existing catalogue and archive management systems

Seamless integration with established archive management platforms and cataloguing systems.

Advanced search to support public access to historical government information

Powerful search capabilities enabling citizens and researchers to discover and access historical records.

GDPR-compliant workflows to protect sensitive personal data in archive collections

Built-in data protection controls to ensure compliance with GDPR and sensitive data handling requirements.

Service Benefits

Faster public access

Speeds up public and researcher access to historical archives and heritage information across the UK.

Reduced storage costs

Cuts physical storage costs while helping preserve the condition of original archive materials.

Improved FOI compliance

Enhances Freedom of Information responses by making records rapidly searchable and retrievable.

Supports digital strategies

Underpins digital transformation strategies across UK public sector archive and heritage services.

Protects heritage and enables remote work

Safeguards fragile documents through digital preservation and enables remote work for archive staff across multiple locations.

Summary & Key Advantages

Why Choose This Service

- Purpose-built for UK public sector archives, libraries, heritage organisations, and local authorities.
- Combines AI-powered OCR, metadata automation, and secure multi-cloud storage in a single SaaS platform.
- Accelerates digitisation projects at scale with batch processing and quality control tooling.
- Strengthens compliance with GDPR, FOI, and government security and data residency requirements.
- Integrates with existing catalogue, digital preservation, and public access portals to enhance current workflows.
- Improves transparency, accountability, and citizen access to public records and historical information.
