

Intelligent Legal Records Search and Cross-Referencing Platform

AI-powered legal research and document discovery for UK public sector

Secure semantic search, citation checking and contextual cross-referencing of legal records

Reduced research time

Cut legal research effort by up to around seventy percent through faster semantic search and retrieval.

Improved citation quality

Increase accuracy and consistency of legal citations across all documents via automated verification.

Deeper legal insight

Enhance decision-making with comprehensive contextual analysis and cross-references across statutes and case law.

Transform Public Services

- Purpose-built for UK public sector legal, compliance and regulatory teams with GDPR-compliant cloud hosting in
- Delivers major time savings in legal research through advanced semantic search and real-time multi-repository
- Reduces risk of errors and outdated references via automated citation checks and continuous legal database
- Strengthens governance with encryption, role-based access, audit trails and recognised security standards such

Service Overview

This service is an AI-powered legal records search platform for the UK public sector that streamlines case law research, compliance and document discovery. It uses intelligent semantic search and contextual cross-referencing to rapidly retrieve relevant precedents, statutes and documentation while maintaining GDPR-compliant cloud hosting with comprehensive audit trails.

Core Capabilities

- Semantic search across UK case law, legal precedents and related documentation
- Intelligent cross-referencing of statutes, regulations and case documents for contextual analysis
- Secure, GDPR-compliant cloud delivery with role-based access control and full audit logging

Key Features

Advanced semantic search across UK case law and legal precedents

Intelligent cross-referencing of related statutes, regulations and case documents

Real-time document retrieval from multiple legal databases and public repositories

Automated citation verification to ensure accuracy of legal source references

Customisable search filters (jurisdiction, date, relevance, document type)

Secure cloud architecture with role-based access control and encryption

Collaborative annotation tools for team research notes and document sharing

Comprehensive audit trails tracking searches, citations and document access

Service Benefits

Reduced research time

Cut legal research effort by up to around seventy percent through faster semantic search and retrieval.

Improved citation quality

Increase accuracy and consistency of legal citations across all documents via automated verification.

Deeper legal insight

Enhance decision-making with comprehensive contextual analysis and cross-references across statutes and case law.

Stronger compliance

Support alignment with UK legal standards, regulatory frameworks and GDPR requirements for public sector bodies.

Better collaboration & assurance

Enable collaborative research across teams while providing transparent accountability through detailed audit logs.

Summary & Key Advantages

Why Choose This Service

- Purpose-built for UK public sector legal, compliance and regulatory teams with GDPR-compliant cloud hosting in UK/EEA.
- Delivers major time savings in legal research through advanced semantic search and real-time multi-repository retrieval.
- Reduces risk of errors and outdated references via automated citation checks and continuous legal database updates.
- Strengthens governance with encryption, role-based access, audit trails and recognised security standards such as ISO/IEC 27001.
- Supports cross-department collaboration with web-based access, annotations and no local installation required.
- Scales across public, private, community and hybrid cloud models to fit diverse government IT environments.
