

AI Ethics & Bias Audit for Public Sector Algorithms

Real-time bias detection and fairness auditing for UK public sector AI and decision systems

Transparency and compliance platform for councils, NHS, and central government algorithms

Reduced discrimination risk

Proactively identifies and addresses algorithmic bias in public services before it harms citizens.

Enhanced public trust

Increases confidence in government services by making algorithmic decisions more transparent and fair.

Regulatory compliance

Helps organisations meet Equality Act and public sector equality duty obligations, as well as GDPR requirements.

Transform Public Services

- Purpose-built for UK public sector equality, GDPR, and transparency requirements
- Real-time monitoring and continuous audit trails rather than one-off assessments
- Supports councils, NHS, central government, and local authorities across diverse AI use cases
- Combines bias detection, fairness testing, and transparency reporting in a single SaaS platform

Service Overview

This service is a real-time AI ethics and bias audit platform for UK public sector algorithms, focusing on fairness, transparency, and regulatory compliance. It supports councils, the NHS, and government departments with bias assessments, automated testing, and transparency reporting to reduce discrimination risks and enhance public trust.

Core Capabilities

- Real-time algorithmic bias detection across UK public sector systems
- Automated fairness testing aligned with UK equality, GDPR, and public sector duties
- Comprehensive transparency and accountability reporting for algorithmic decision-making

Key Features

Real-time algorithmic bias detection

Continuous monitoring across public sector AI and decision systems to identify bias as it occurs.

Automated fairness testing

Compliance-driven testing aligned with UK equality and GDPR regulations for consistent auditing.

Transparency reporting dashboards

Clear, accessible dashboards for algorithmic accountability and stakeholder communication.

Regulatory compliance monitoring

Automated tracking aligned with the Equality Act and public sector equality duties.

Protected characteristic impact assessment

Comprehensive analysis across government AI and decision systems for all protected groups.

Integration with existing infrastructure

Seamless connection with government digital services and legacy systems.

Continuous audit trail documentation

Complete documentation meeting UK transparency and accountability standards.

Explainable AI interface

Clear, understandable justifications for identified bias and fairness issues.

Service Benefits

Reduced discrimination risk

Proactively identifies and addresses algorithmic bias in public services before it harms citizens.

Enhanced public trust

Increases confidence in government services by making algorithmic decisions more transparent and fair.

Regulatory compliance

Helps organisations meet Equality Act and public sector equality duty obligations, as well as GDPR requirements.

More equitable service delivery

Supports fair outcomes across diverse communities and protected characteristics.

Stronger accountability and governance

Provides clear audit trails and impact data to support evidence-based policy and mitigate legal and reputational risk.

Summary & Key Advantages

Why Choose This Service

- Purpose-built for UK public sector equality, GDPR, and transparency requirements
- Real-time monitoring and continuous audit trails rather than one-off assessments
- Supports councils, NHS, central government, and local authorities across diverse AI use cases
- Combines bias detection, fairness testing, and transparency reporting in a single SaaS platform
- Mitigates legal, reputational, and operational risks from biased algorithmic decision-making
- Strengthens public trust by embedding ethical oversight into critical digital services
