Edge Cloud Deployment

G-Cloud 15 Service Definition

Lot 1a: Infrastructure as a Service (IaaS) and Platform as a Service (PaaS)

Edge Cloud Deployment

Service Description

Deploys mission-ready digital environments to cloud or edge locations for operational use. It assembles assured components into deployable configurations and runs them on public cloud, forward, or disconnected infrastructure. The service supports rapid setup, reconfiguration and teardown of mission environments.

Features

- Assured, repeatable environment builds (Infrastructure as Code).
- Rapid deployment to cloud or edge (including disconnected infrastructure).
- Pre-approved capability components assembled into mission packages.
- Self-service portal for environment lifecycle management.
- Secure identity and access management with RBAC and MFA.
- Built-in monitoring, logging and health dashboards.
- Federation-ready design for multi-tenant and coalition operations.
- Automated updates and controlled software distribution.
