2 Introduction

TRL was established in 1933 within the British Government as the UK's Transport Research Laboratory and was subsequently privatised in 1996. Today, TRL has more than 1,000 clients across 145 countries, driving positive societal and economic benefits worldwide.

Much of our research leads to the development of innovative software solutions that address transport issues at all scales, both in the UK and internationally. We develop powerful software based on solid, proven research, yet easy and practical to use. While we are continually developing new software based on cutting-edge research, well-established products such as iMAAP, iROADS, ARCADY, PICADY, TRANSYT, SCOOT, and MOVA are used by hundreds of authorities, consultants, and engineers around the world.

All our products are built to industry-standard quality procedures and comply with the latest data protection standards, which are continually monitored and externally checked. TRL also provides full support, maintenance and training programmes for all its software products.

3 Contact
