

GCloud 15 Lot 3 Services

Experts in Cloud Engineering Service Design & Data and AI

We are an ISO27001, ISO9001, ISO14001 and Cyber Essentials Plus certified Scottish-based company that delivers user-centric software solutions, driving digital transformation for public and private sector clients. Our expertise includes citizen-centric service design, digital transformation projects, data management, cloud architectures, artificial intelligence and software development.

Our experience and deep understanding of the public sector with a particular expertise in digital service standards makes us a trusted partner for government agencies and organisations seeking to enhance their digital services.

Ember are always trying to push the boundaries of technology and of what's feasible and what's possible. That's an attitude I love. I love pushing the boundaries of what's possible and never settling for 'good enough'

Digital Asset Consolidation and Managed Service

How we can help

Organisations often manage large numbers of websites and applications built over time by different suppliers.

These assets are hosted across multiple environments with inconsistent security, support and governance.

The resulting fragmentation increases cost, risk and makes effective oversight and future planning difficult.

We audit, consolidate and manage existing websites and applications as a single supported estate.

Our service brings assets into a unified hosting and support model, improving security, visibility and control.

This reduces complexity while creating a strong foundation for future change.

Our Digital Asset Consolidation and Managed Service

- Audit digital assets
- Create asset inventory
- Assess hosting and risk
- Plan consolidation approach
- Transition live services
- Standardise hosting
- Implement monitoring
- Provide ongoing support
- Maintain documentation
- Support future transition

Digital Asset Consolidation and Managed Service

We provide an operational managed service to audit, consolidate and support existing websites and applications across fragmented digital estates. The service reduces risk, cost and complexity by bringing disparate live assets into a unified hosting and support model, improving security, governance and day-to-day manageability without requiring redevelopment.

Features

- Audit and inventory of websites and application estate
- Assessment of hosting, security, compliance and operational risk
- Consolidation into a unified hosting and support model
- Support for legacy and modern platforms without redevelopment
- Secure transition of live services with minimal disruption
- Standardised monitoring, backups & resilience controls
- Unified service desk and incident management
- Ongoing patching, maintenance & operational support
- Documentation & knowledge capture for consolidated estate
- Transition planning for future migration or decommissioning

Benefits

- Reduces operational complexity across digital estates
- Improves visibility of owned digital assets
- Lowers security and compliance risk
- Simplifies hosting and supplier management
- Improves resilience of live services
- Avoids forced redevelopment of legacy platforms
- Reduces duplicated hosting and support costs
- Enables clearer governance and accountability
- Supports safer, phased future modernisation
- Frees internal teams from day-to-day firefighting
