

GCloud 15 Lot 3 Services

Experts in Cloud Engineering Service Design & Data and AI

We are an ISO27001, ISO9001, ISO14001 and Cyber Essentials Plus certified Scottish-based company that delivers user-centric software solutions, driving digital transformation for public and private sector clients. Our expertise includes citizen-centric service design, digital transformation projects, data management, cloud architectures, artificial intelligence and software development.

Our experience and deep understanding of the public sector with a particular expertise in digital service standards makes us a trusted partner for government agencies and organisations seeking to enhance their digital services.

Ember are always trying to push the boundaries of technology and of what's feasible and what's possible. That's an attitude I love. I love pushing the boundaries of what's possible and never settling for 'good enough'

Cloud Engineering, DevOps and CI/CD Services

How we can help

Delivery pipelines are critical to maintaining and improving live services, yet many organisations struggle with unreliable CI/CD processes.

Poorly maintained pipelines increase deployment risk, slow delivery and introduce security issues.

This undermines confidence in releasing changes and impacts overall service reliability.

We provide operational DevOps and CI/CD support to keep delivery pipelines reliable and secure.

Our service focuses on maintaining deployment tooling, improving release confidence and embedding good practices that support continuous, low-risk change.

Our Cloud Engineering, DevOps and CI/CD Services

- Support CI/CD pipelines
- Maintain deployment tooling
- Embed security into pipelines
- Support infrastructure as code
- Respond to deployment incidents
- Optimise pipeline performance
- Manage secrets and credentials
- Support release governance
- Document delivery processes
- Enable internal delivery teams

Cloud Engineering, DevOps and CI/CD Services

We provide operational DevOps and CI/CD support for live cloud services, maintaining pipelines, improving reliability and supporting secure, repeatable deployments. The service focuses on keeping delivery processes running effectively.

Features

- Operational support for CI/CD pipelines, build systems and deployment tooling
- Secure release processes: approvals, artefact integrity and environment controls
- Infrastructure-as-code support (Terraform/CloudFormation)
- Monitoring and observability improvements integrated into delivery pipelines
- Incident support for failed deployments, rollbacks and issues
- Pipeline performance tuning to reduce build times
- Secrets management and key rotation processes
- Change and release governance support aligned to operational risk levels
- Documentation of pipelines, environments and procedures
- Enablement sessions to help teams operate and maintain
- DevOps tooling

Benefits

- Reduces release risk and improves deployment success rates
- Improves service stability with repeatable, controlled deployments
- Speeds up delivery cycles while maintaining security and governance
- Shortens recovery time through well-practiced rollback and incident processes
- Improves maintainability through infrastructure-as-code and documentation
- Reduces operational toil by automating common tasks safely
- Strengthens security by embedding secrets and controls into pipelines
- Improves visibility with monitoring integrated into delivery workflows
- Improves team productivity through faster pipelines and clearer processes
- Builds internal capability to sustain DevOps practices long term
