Construction Works DPS

G-Cloud 15 Service Definition

Executive Summary

The Construction DPS offers end to end electronic procurement software enabling public sector organisations to buy services in relation to construction activities. The software is designed to be intuitive and in turn, very user friendly. With little training, users can instantly start to engage organisations.

Advertising projects, running expressions of interest, managing mini competitions and award work to successful businesses, as well providing feedback on unsuccessful bids. Whilst at the same time, introducing collaboration amongst colleagues, teams, departments, and supply chain partners.

- » Forward thinking procurement software providing access to a pre-approved suppliers
- » Construction Dynamic Purchasing System
- » Cost savings through streamlined procurement processes and driving competitive tender bids

Key Benefits

Cloud based Procurement Software

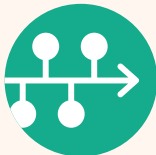

Real time information on projects, procurements, and supply chain

Oversight & transparency across Construction buying activities

Early engagement of a local supply chain

Streamlined and consistent procurement processes

Collaboration amongst colleagues, teams, departments, and supply chain

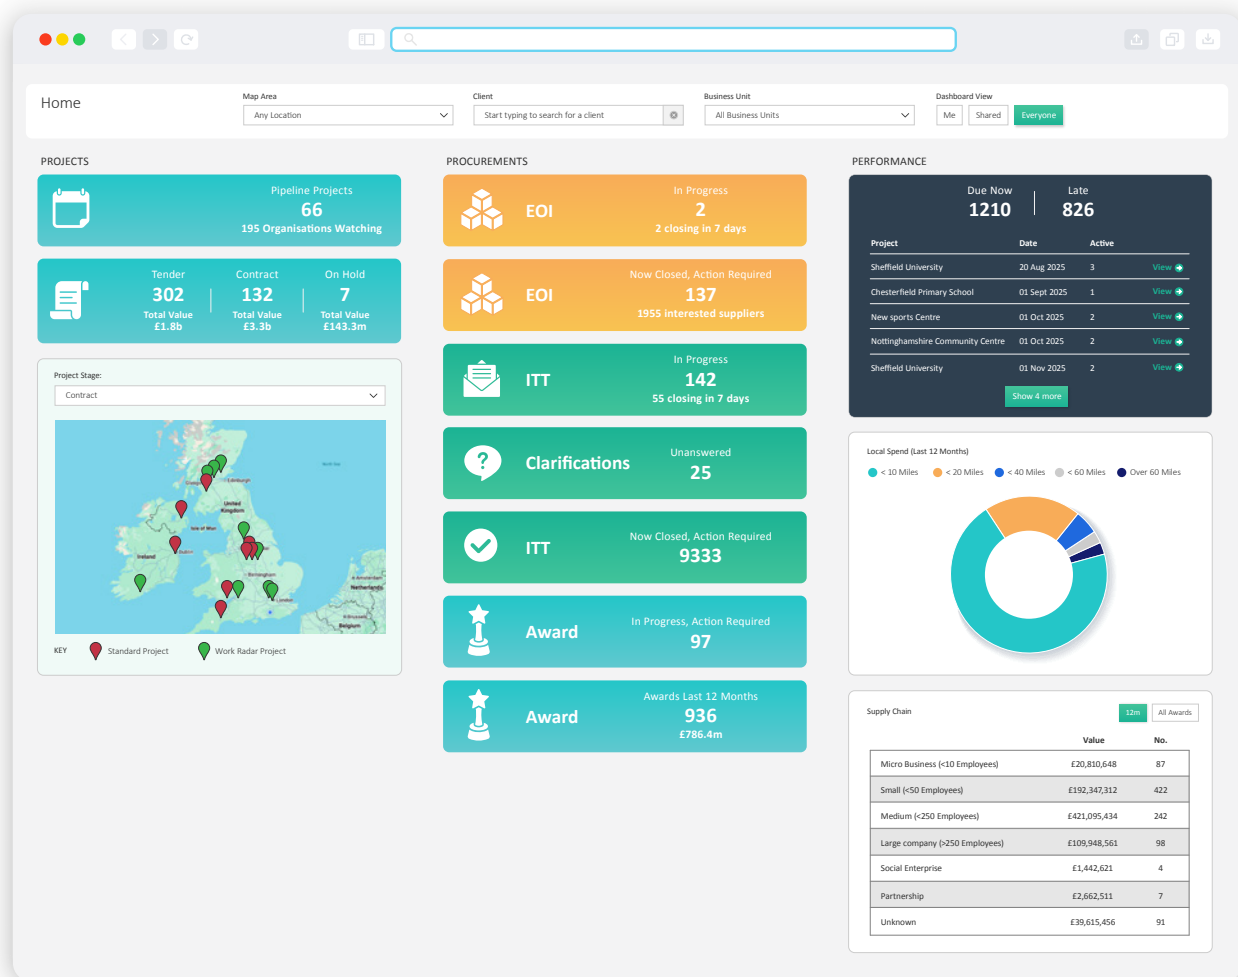

Drives competitive tender processes

Real Time Dashboards

Having access to live information on live or ongoing projects offers a host of benefits. This is often from a compliance perspective. Construction activities are ongoing and compliant suppliers today, may not be complaint suppliers when it comes to working on site.

From a financial perspective. Giving your finance teams a forward or pipeline view of orders in advance of them being raised ensures they can manage cash flow effectively and make payments to the right subcontractors at the right time, for both your organisation and your supply chain.

Compliance oversight
Financial risk

Collaboration

Expressions of Interest

Innovative technology makes it very easy for your teams to engage the marketplace for construction activities. Not only is this process very quick and easy for your teams to run, manage and oversee, it saves exceptional amounts of time later down the line. Running the EOI process ensures you only send tenders and engaging to those suppliers interested. It is also a great way to advertise your upcoming work opportunities to local suppliers, allowing them to plan ahead of potential opportunities coming their way.

Engage the market
Stimulate the economy
Saves time and money
Advertise opportunities in advance

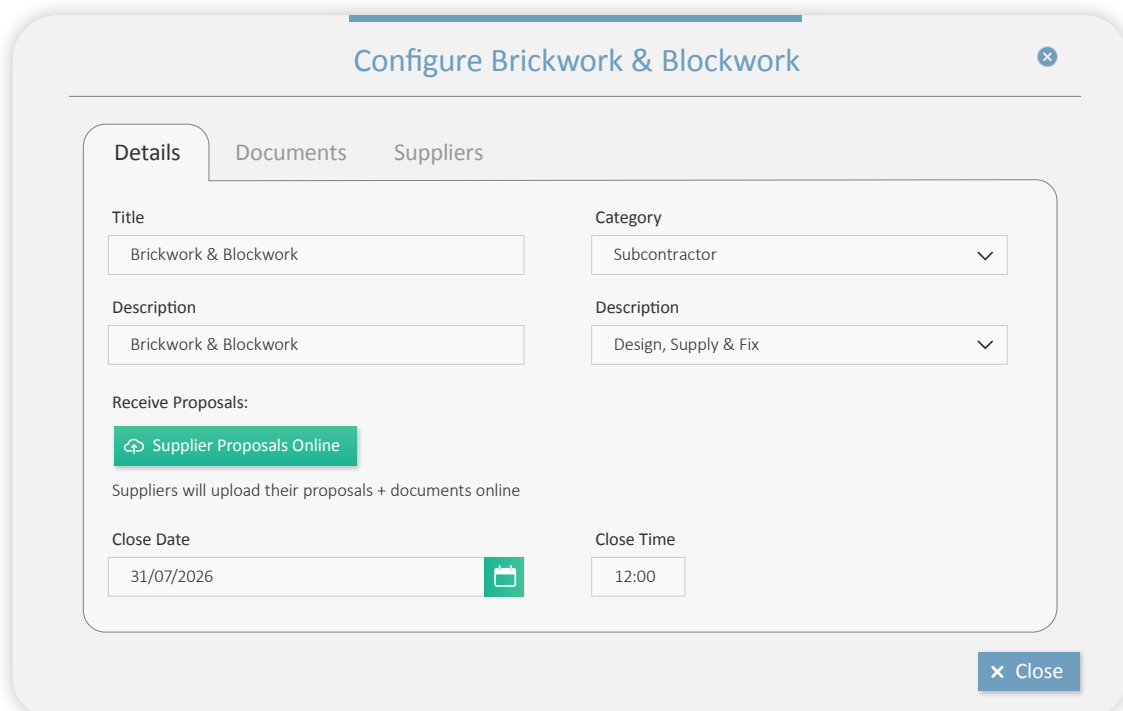

Mini Competitions

A robust procurement process which is proven to drive competitive tender submissions from suppliers offering tangible costs savings on buying activities. Providing intangible cost savings through smart software which manages streamlined and efficient procurement processes whilst reducing the risk of noncompliant buying activities.

With a full audit trail, and a set of rules to encourage compliance, the collaborative DPS software is more than a buying tool. It empowers your teams to drive success in sourcing the best contractors for each project whilst at the same time, driving cost savings directly, and in directly into your organisation.

Drives competitive tenders
Streamlines Procurement
Increase compliance & reduces risk
Aligns internal teams & their process

Awards

Once the mini competition has come to an end, the proposals (held in a vault) are opened up at the same time, evaluations completed and a decision made on who to award the work to, with the award information captured on the platform. Direct awards can also be enabled (if required).

Either way, the software manages both these process in a way which encourages your teams to finalise the complete audit trail. Capturing award information such as locality, speciality, business type and so on. Allowing you to then report and analyse the entire process and promote your organisation through how well you engage local suppliers and award work locally through open and fair competition.

Award successful suppliers
Feedback on lost tenders
Forward view of financial information
Prevent overloading the supply chain

Supplier Performance

Much more than good or bad performing suppliers. This is a great opportunity to share the information with your teams and across your business. We join up the dots when it comes to suppliers and their performance whilst managing the mini competition process for example. It may not be a case of not engaging a supplier who has performed badly, but instead, manage them, and help them become better at what they do.

Award work to good and bad performing suppliers to bring them up to speed. Award directly to good performing suppliers on reactive works. Performance is too often kept in a box or used to tick or cross suppliers. With the collaborative DPS, there's much more to it, and it's all easily accessible.

Pre-Approved Supply Chain

Throughout the tender process, you have access to a pre-approved supply chain. With relationships with Health & Safety Accreditation services, our software does not mandate preferred compliance routes. We recognise the flexibility suppliers are looking for and how it is beneficial to creating a pre-approved supply chain. In turn, this offers huge benefits to buyers, a flexible approach in creating a durable supply chain.
