Moving data, applications or other business functions to a cloud computing environment can provide many benefits for companies, including reductions in cost and increases in performance and security. Unfortunately, cloud transformations are complex, can take two or more years to accomplish, and many do not result in meaningful cost savings or other benefits for the companies undertaking them.

Cloud migration challenges

Manual discovery and dependency mapping

The high cost of cloud migration

A lack of performance optimization

A lack of visibility into the migration process

With UST CloudVelocity, companies can migrate to the cloud with confidence and speed using an accelerated cloud transformation framework. UST CloudVelocity.AI can help companies:

- Reduce the cost and complexity of migrating to the cloud with UST CloudVelocity.AI
- Migrate with speed and scale using discovery, move execution, and recovery automation
- Conduct dependency mapping and network topology with a configuration management database
- Receive insights and recommendations on dependencies, costing, and rightsizing with the Migration AI Engine
- Obtain migration status, KPIs and reporting information with exceptional dashboards
- Reduce migration costs and increase performance optimization
- Improve visibility using via UI dashboards

Agility

30% Faster time to migrate

- Automated discovery, migration, and recovery
- Streamlined process and progress reporting

Reliability

20% More successful migrations

- Application dependencies mapping
- Cost optimized and scalable

Intelligence

20% Better user experience

- Intuitive dashboards and migration reporting
- Point-and-click migration from desktop or mobile console
