MiDoS Service Pricing

LICENSING APPROACH

MiDoS is licensed on a commissioning or geographical footprint. Our key principals are:

- A license provides for unlimited users and use across the defined area.
- Our license costs are linked directly to the population figure of any given area – meaning that smaller geographies do not pay disproportionately when compared to larger commissioning bodies.

MiDoS

This includes:

- The MiDoS Directory of Services platform.
- The MiDoS Search Engine (also known as QuickSearch).
- MiDoS Capacity, which includes:
    - Ability to design, build and deploy unlimited capacity grids.
    - Live-time Activity views.
    - Automatic alerting.

The 2026-27 cost is from 3.2 pence per capita population.

The 2027-8 cost is from 3.3 pence per capita population.

A minimum license cost of £10,000 per procurement will be applied, except in the case of individual GP Surgery commissioning when a £1000 minimum license cost will be applied.

New client areas will subject to 1st year setup costs – this will be up to a maximum of a 50% surcharge in year 1.

Example: A license to cover a NHS ICB with a population of 1,000,000 would cost £32,000 per annum in 2026-27.

CONSIDERATIONS

- The license costs do not include project management or deployment to users.
- All prices exclude VAT at the prevailing rate (currently 20%).
