

Insight

Continuous cloud security, compliance
and automation made simple.

Cut complexity, reduce risk, stay compliant *and* save time
with a data-driven platform.

Why Strata?

Today, there is more to protect, scattered in more places, than ever before. With this complexity, preventable breaches keep happening; humans just can't keep up.

Why? In the hybrid cloud, unpatched servers, unprotected devices and misconfigured tenants are easy to miss because data is siloed. With no single source of truth, second and third line teams must work manually and inefficiently.

Strata brings together all your cloud and security data so you can automate protection, manage risk and stay compliant, *with a single platform*.

Security, Simplified

Simplified Control

Stay in control - security oversight for all your tools, endpoints, servers and clouds.

Simplified Protection

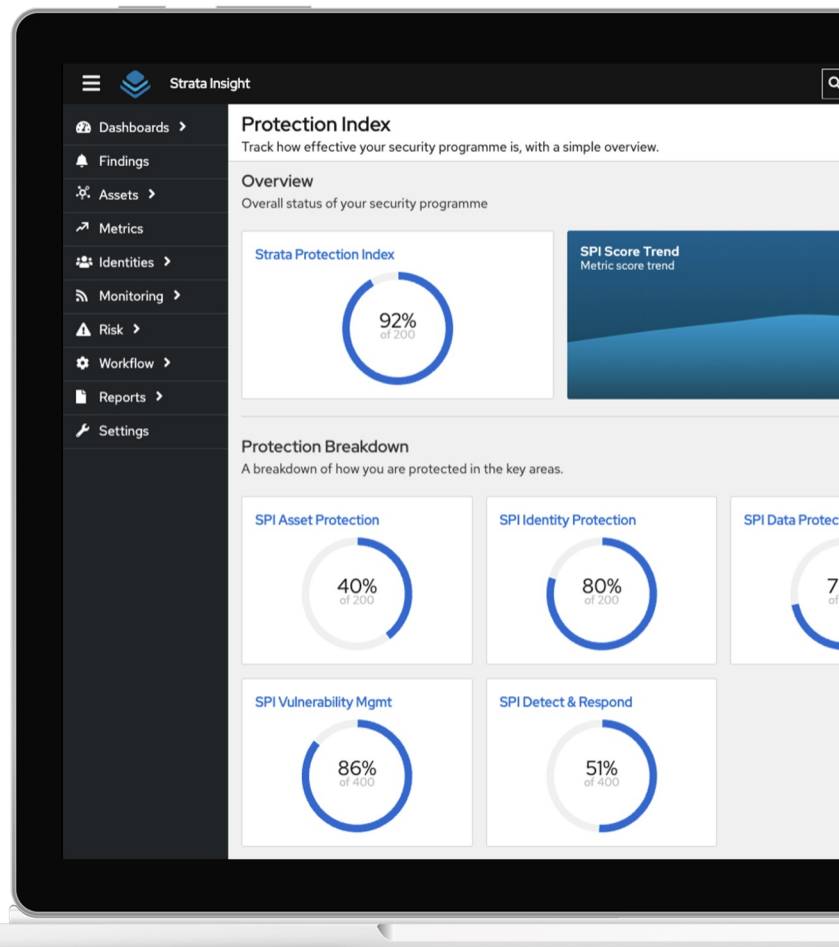

Stay protected - automate and prioritise vulnerability detection, security gaps and responses, without noise.

Simplified Compliance

Stay compliant - automated, continuous metrics and reports for ISO, NIST, PCI, CAF, CE and more.

Product Highlights

Save 1000s of Hours

What could your team achieve with one extra day every week?*

Demonstrate 800% ROI

Payback in months, with returns of 800% achievable*.

Simple Integration

Integrates with all your clouds, security tools and on-prem IT.

Content Included

Pre-built control frameworks, reports and metrics included.

Rapid Results for Busy Teams

Insight is software-as-a-service, rapidly integrated with your systems in hours, not weeks. Delivered with our "managed data plane" service, it includes everything you need so you can focus on staying secure, not managing tools or spreadsheets.

* Based on typical manual approach time requirements plus time savings or work avoided in typical implementation scenarios.

Strata Insight

Simplify security and streamline compliance with smart automation.

How It Works

Insight rapidly integrates to provide consistent, reliable cloud, asset and security state data. Built-in content (rules, metrics, control frameworks etc) delivers immediate, actionable security posture information, shortcutting laborious manual work.

Automations continuously normalise, classify and assess environments, highlighting findings with tickets for remediation.

This approach frees IT, security, and compliance teams from manual work, allowing them to efficiently spot protection and compliance gaps earlier, significantly reducing costs.

Management gains holistic cyber oversight can make better decisions based on live metric data rather than estimates.

Automation Use-Cases

Hybrid Cloud Security

Protect all your hybrid cloud tenants in one place & automate responses.

Vulnerability Management

Cut noise by 90%; prioritise across multiple scanners & tools.

Asset Management

Detect shadow IT & automatically maintain a CMDB from existing tools & data.

Compliance Automation

Continuously verify protection & provide clear, actionable reporting.

Key Features

Any Framework, The Right Metrics

Control frameworks and metrics for ISO, NIST, PCI, Cyber Essentials, CAF (+custom) built in for rapid alignment with your strategy and to showcase delivery.

Advanced Automation

Automations take the strain of tagging your assets, checking asset cyber protection, verifying accounts (e.g. MFA) and creating tickets.

Single View & Active Support

A de-duplicated, consistent view of all assets, user accounts and security data in one place. Drill down to detailed data, with active support on hand via Teams.

Managed Data Plane

Includes everything needed for security visibility and compliance for the long term, without cost surprises. Includes active support for data collection, data retention, de-duplication & metric calculations.

Reporting

Included templates for management, operational and technical reporting, customisable to your needs.

Secure & Private

Data is encrypted and stored in private client cell with the highest levels of segregation (data residency of your choice, BYOK optional) and access controls.

... and more – get in touch to challenge us with your use-case
