

IBM as a Service - IBM Cloud, Power Virtual Server (PVS)

Service description

PPT provide a managed service for IBM environments, including; management, design and implementation services around IBM's Cloud Platform including PVS (Power Virtual Server, Power VS) including AIX 5.3 & 5.7 and X86 environments. Eliminate backup software by integrating data orchestration, catalogue management, and de-duplicated storage into a single, scale-out fabric.

Service features and benefits

Service features

- End-to-end design, implementation, and management of IBM Power Virtual Server
- Application Consistent Snapshots
- Virtual and Physical server support
- Converged Backup and Recovery Platform
- Fully Managed Service
- Offsite Replication and Archive
- SLA Policy Driven Management
- Bespoke Public, Private and Hybrid Cloud
- Scale-out, de-duplicated storage fabric improving resilience, efficiency, and scalability enterprise
- Unified data orchestration and catalogue management removing traditional backup software

Service benefits

- Faster recovery and provisioning with integrated data orchestration and catalogues
- Granular RPOs
- Proactive Support
- Fully Managed Solution
- Consolidated multi-site monitoring
- Lower costs by eliminating traditional backup software and infrastructure overhead

- Consistent performance and governance across hybrid IBM Cloud environments
- Reduced operational complexity across IBM Power, AIX, and x86 environments
- Improved data resilience through unified, scale-out, de-duplicated storage fabric
