

Misco / Cloudflare - Managed Security Service Provider

Service Definitions

DNS

Enterprise-grade Authoritative DNS service. 1 Domain Name.

<https://developers.cloudflare.com/dns/>

CDN

Edge content delivery: Ultra-fast static content caching and delivery via Cloudflare's global network, secured.

<https://www.cloudflare.com/en-gb/application-services/products/cdn/>

WAF

Blocks attacks on web applications from zero-day vulnerability exploits, common attack techniques, use of leaked credentials, and more with sophisticated, layered rulesets powered by Cloudflare's machine learning and threat intelligence.

<https://developers.cloudflare.com/waf/>

Layer 7 DDoS

Cloud-native layer 7 distributed denial-of-service protection: Automatically detect and mitigate layer 7 DDoS attacks via unmetered, unlimited, and autonomous DDoS protection systems. Identify and mitigate automated traffic to protect web properties.

<https://developers.cloudflare.com/ddos-protection/>

Volume limits of the service

1 Domain Name

<1TB data download per month
