Solution Overview

A secure, scalable and high-performance hosted environment.

- Quick, easy and remote access to your data and applications
- Control costs and protect your investment with advanced technologies
- Have confidence in extensive data backup services and audit controls
- Focus your energies on the core activities that drive your organisation
- Automatically implement product upgrades with zero hassle

Build your future, your way

MRI's next-generation SaaS solutions provide the reliability and security you require, along with the flexibility that allows you to adapt and grow your business. By deploying your system in our hosted environment, you can focus on managing your core business, and not IT headaches. You can also have complete confidence in a secure, stable, fully managed infrastructure that has been built and is maintained to the most stringent industry standards. We deliver cloud-based software for organisations running some of the largest and most complex real estate portfolios in world, and in the European region we have invested and dedicated significant resource to creating world-class data centre facility. Leverage our expertise and experience, and discover how you could unlock even greater efficiency and scalability in your operations.

Information Security

Data Security arrangements for client data

Standards and Governance

Our services are provided in accordance with the Cyber Essentials standard, the ISO 27001 information security standard best practices, and have been regularly penetration tested by a third party.

An Information Security Policy is in operation across MRI to support the confidentiality, integrity, and availability of MRI SaaS Solutions. The policy includes appropriate controls relating to physical security at MRI locations, technical security with respect to client data, organisational security arrangements for employees and subcontractors (including training and vetting), disaster recovery and business continuity, vulnerability testing and security audits, and data breach procedures.

MRI's Information Security Policy complies with all applicable laws, is reviewed annually, and updated as required. Policies are available to all staff, with changes communicated as appropriate. Training takes place as part of induction and is refreshed annually, with additional role-specific training for technical teams.

Personnel Security

All MRI staff undergo pre-employment screening via HireRight, covering identity verification, employment and education history, criminal checks, SSN trace, drug testing, and national criminal search.

Employees complete mandatory security and confidentiality training at induction, with refresher training delivered annually and completion tracked by HR systems. Training is tailored by role, with technical staff receiving more advanced security training.

Access Controls

Access to client data is based on the principle of least privilege. User accounts have only the permissions necessary to perform their role. Permissions and access levels are reviewed regularly, with management approval required for any changes.

Within the application, client administrators can control permissions at both process and function level, setting read, write, delete, or deny access. Permissions groups can be configured by role or functionality.

Client data access by MRI personnel is restricted to a limited number of authorised support staff, only for activities such as troubleshooting, training, or maintenance. Such access is controlled, audited, and reviewed.

Encryption and Cryptography

All client data in transit is encrypted with TLS 1.2/1.3. All data at rest is encrypted using AES-256 Transparent Data Encryption. Encryption keys are managed in line with MRI's Cryptographic Policy. MRI's Information Classification Policy provides detailed guidance on security classification and correct handling of assets.

Application and Infrastructure Security

Production and test environments are maintained in separate subscriptions.

Developers and testers follow MRI's Secure Development Guidelines, are trained annually in OWASP vulnerabilities, and operate under change control processes.

MRI uses proactive daily monitoring of services, runs regular internal and external vulnerability scans, and engages CREST-certified third parties to conduct annual penetration testing of applications and infrastructure. Findings are tracked and remediated.

MRI Cloud Application Accounts are unique to a given user. MRI Cloud Technical Platform accounts (e.g., Oracle SYS, SQL Server SA) may be shared in accordance with defined security roles and responsibilities.

Third-Party and Supply Chain Security

MRI Cloud Services supply chain is managed according to MRI supplier management procedures. This includes security obligations in contracts, confidentiality agreements, GDPR/Data Protection Act compliance, and risk assessments during onboarding and change. All supplier contracts are reviewed by MRI's Legal team for compliance requirements. MRI's data centre providers are independently audited and certified.

Monitoring and Logging

As a hosted solution, MRI will be responsible for monitoring.

MRI utilizes a variety of tools to monitor the health, performance, and security of our global data centers. MRI SaaS Technical Platform automatic alert/monitoring takes place at Infrastructure, Virtualization, Security, Operating System and Application Level. Access to monitoring is restricted to MRI Software Engineering and Operations.

MRI Software uses a 3rd party SOC for managing our SIEM and monitoring events generated by it. Applicable host and infrastructure logs are forwarded to our SIEM, and application logs will be incorporated at a later date.

Any service-level incidents are managed internally within our CRM system. All client incidents in relation to availability can be reported and viewed via the myMRI portal, and clients can sign up for notifications.

Incident Response

MRI maintains a robust Incident Management programme. Incidents follow three stages: Investigation (discovery and evaluation), Protection (containment and eradication), and Restoration (remediation and recovery). Lessons learned are documented in After-Action Reports and updates made to training and processes.

In the event of a data breach, MRI will without undue delay:

- Investigate the cause.
- Notify the client and provide sufficient information for regulatory reporting.
- Contain and remedy the breach.
- Take steps to mitigate impact and restore integrity.
- Assist the client in remediating or mitigating any damage.
- Notification is provided in line with GDPR and contractual requirements.

Data Retention

MRI solutions enables you to set your own data retention period, i.e. 7 years, and this is agreed during your implementation.

MRI complies with all laws and regulations applicable to our services and industry, including GDPR and Data Protection Act 2018.

We focus on keeping our products ahead of legislation changes. Under GDPR we have obligations as a Data Processor, different from the obligations held by Client's as a Data Controller. This is detailed in full in the Data Protection and Security Schedule which forms part of our standard terms and conditions/master contract.

In addition to meeting our own compliance requirements, we have taken steps to help support our clients in meeting their GDPR requirements. Please see our dedicated GDPR page for FAQ on GDPR: <https://www.mrisoftware.com/gdpr/>

Our "Data Retention Policy" outlines record/contract/document retention; however it is not auditable by our clients. This document is classified as confidential and as such, we can't share it externally.

Data will remain in the system until Client's take steps to archive or delete the data. While in the Live environment, data remains fully accessible and editable. Client data will be managed by Client's staff in accordance with your own data handling processes, including consent and retention.

As the data processor, we will only process/destroy data under the instruction of Client's/data controller.

Can data be automatically deleted after a set period (ie 6 month)

Yes. Clients' will be able to set it's own data retention rules per application type and status.

What In-house technical capabilities to implement and maintain is required?

None. The solution is cloud-hosted Software as a Service (SaaS) and requires no on-premise infrastructure or technical resources from client's.

Information Security Council: An executive-level board

We benchmark the team's role and size based on our company, our clients' industries, and the sensitivity of the data we house. The Information Security Council and InfoSec Team annually evaluate the role, scope, and size of the team.

We operate an Information Security Management System following ISO 27001 best practices. Our policy includes controls and measures for:

- Physical security at all MRI locations involved in the Services.
- Technical security for Client Data in MRI's possession.
- Organizational security for employees and representatives, including training, awareness, staff vetting procedures, passwords, and security credentials.
- Vulnerability Testing and Security Audit.
- Data Breach Procedures.

Our policy follows all applicable laws and is reviewed and updated yearly.

The Information Classification Policy guides the correct security classification of information.

The MRI Acceptable Use Policy covers:

- Computers
- IT Equipment and Devices
- Removable Media
- Mobile and Remote Working
- Assets and Office Equipment
- Usernames and Passwords
- Administrator or Privileged Accounts
- Software
- Internet and Email
- Instant Messaging (IM) and Collaboration Platform (CP)
- Reporting Security Incidents
- Acceptable Use Policy Monitoring and Review
-

Security & Compliance: Making sure our applications meet security standards

We are certified with Cyber Essentials and set up our environments to follow the NCSC 14 Principles of Cloud Security. MRI has an Information Security (InfoSec) team approved by senior management. The InfoSec team includes security professionals working with the Information Security Council to review security policies, technologies, and strategies for MRI Software

Customer Service & Ongoing Support

Service Management

Your MRI Project Manager will handle the implementation phase. During this time, your Account Manager will stay with you and be a point of contact if any issues arise. The MRI Project Sponsor will be a permanent secondary contact.

After implementation, if there is an issue, the first contact would be the Client Support Helpdesk. If they can't resolve the issue, it will be escalated to the Client Support Team Leader, then the Client Support Director, and finally your MRI Account Manager.

Managed Services

MRI Managed Services offers a range of services for lease administration, property accounting, and system administration. These services are provided by a team of property and finance professionals with a strong track record. They have deep knowledge of industry processes and compliance requirements, combined with a deep understanding of MRI's solutions. Our teams can help reduce your overheads, improve operational efficiencies, and free your team to focus on strategic business goals.

Whether it is MRI's System Administration service to handle all tasks related to your project, MRI's Property Accounting service combining industry knowledge, accounting knowledge, and software knowledge, or lease administration, MRI Managed Services are available for your convenience to ensure no resources are missing in your company workflow with the least costs involved

Recurring Services

MRI's Recurring Professional Services Package allows you to buy service credits at lower rates

and lock in those rates for up to three years without compromising on service. For example, work with your dedicated MRI team who'll advise on service contracts and deliver training and consulting from anywhere. You can also have peace of mind with access to MRI solution experts with fast response times. You'll receive insights into your technology performance, status reports, and service improvements to help reduce the threat to your technology and keep teams productive.

Service Delivery Framework

MRI is proud to be a customer-centric organization, always looking to deliver an exceptional customer experience and drive continuous improvement across our business. Our methodology is in line with ITIL standards and built up over four decades of experience in providing real estate technology solutions. We include maintenance and support for all our clients as part of the annual fees.

Client Support Team

Service Management

Our in-house support team knows our software well, so they can solve most support calls directly and can be reached through the myMRI portal or by phone. No matter how you contact them, all support calls are tracked and managed until they are resolved using our case tracking software.

The Client Support Team is available by phone from 08:30 to 18:00, Monday to Friday, except holidays and Sunday to Thursday in RSA. Support cases can also be logged 24/7 via the myMRI portal, where users can register new cases and track existing ones.

MRI's Global Client Support group will make every effort to ensure that submitted cases are given the right level of severity. We respond to cases in the order they are received, with higher severity levels getting priority. Response Time is the time it takes for a Global Client Support representative to first contact the person who submitted the case.

**Response times listed above are estimated targets. Response time is not a resolution goal and should not be interpreted as a guarantee of service. MRI's Global Client Support group will use commercially reasonable efforts to adhere to the time frames listed above. Global Client Support does not provide resolution targets, and Response Time should not be interpreted as a commitment regarding resolution timeframes.*

Release Cycle

We invest in research and development to keep improving our products. We release regular software updates during the year and inform clients about key features before the release date. We can help with planning the testing phase and deploying the updates to the production environment if needed. For on-premises solutions, clients are responsible for loading the update code.

We aim to keep our products ahead of legislation changes. When developing our product roadmap, our development director reviews upcoming legislation changes, gathers feedback from regular focus groups with clients, and applies our overall product vision.

Support Portal

Our client portal lets you report support issues and get instant updates on your cases. It also has forums for product suggestions, training materials, documentation, and case updates.

Core Tools & Functionality

MRI Agora Platform

“The Platform that Powers PropTech™,” [MRI Agora](#) is revolutionising the way organisations bridge the gap across all proptech systems. MRI Agora is industry’s first AI-powered, flexible, and hyper-connected platform that uses smart data to deliver deeper insights.

Agora Insights

Put your data to work for your business

The MRI Agora Insights data and analytics solution empowers your real estate teams to make better decisions with fewer clicks so you can spend less time looking for data and more time acting on it.

Key Features

- Unified data services layer consolidates all your business data in one place, allowing for fast access
- Powerful solution specific, out-of-the-box dashboards provide immediate value
- Singular place to view cross-product analytics and trends
- Customizable dashboards and reports to meet your unique business needs
- AI-enabled Q&A engine to support ad-hoc queries in real-time

Business Benefits

- Gain better insights with a single access point for consolidated data
- Save time from searching by giving teams consistent access to the data they need
- Prioritize needs by identifying trends over time and proactively addressing anomalies
- Get answers at your fingertips
- as and when you need it with AI-driven analysis

Agora Gateway

Optimize Workflow. Unify Your Experience. Streamline Navigation.

Welcome to The Agora Gateway, MRI Software's new centralized login page. Single Sign On, designed for the way you work, a central landing page for all solutions in your ecosystem plus quick and easy navigation between applications. MRI Agora Gateway is a simple, secure and flexible home for users to enter and navigate their journey through the MRI ecosystem, streamlining operations and unlocking a connected user experience

Key Features

- Centralized & sleek navigation via the Agora
- in-product widget
- Notifications system for comprehensive
- portfolio wide cross product alerts
- Personalized client and user experience
 - ✓ Admins add client specific apps and assign
 - ✓ Users may add their own apps

Users may categorize and reorder apps

About MRI

Founded in 1971, MRI is a pioneer of the real estate software industry. From the day we opened our doors, we set out to build game-changing solutions.

MRI's comprehensive and flexible technology platform coupled with an open and connected ecosystem meets the unique needs of real estate businesses—from lease administration to property-level management and accounting to investment modelling and analytics for the global commercial and residential markets.

OUR MISSION

Giving organizations the freedom to transform the way communities live, work and play through the industry's most comprehensive, flexible, open and connected technology platform.

Regardless of size, location, or property portfolio, we understand that every company has unique needs. Real estate owners, operators, occupiers, and investors seek open solutions, configurable to their specific business requirements and goals.

MRI develops lasting client relationships based on nearly five decades of expertise and insight. Through leading solutions and a rich partner ecosystem, MRI liberates real estate companies to elevate their business and gain a competitive edge.

While our operations make us one of the biggest companies of our kind, our experienced and knowledgeable regional teams mean we always offer a personalized approach.

Our People

The company you partner with should have experienced people who can support your business needs. Many of our employees have been with MRI for 15, 20, and even 30 years or more and provide tremendous knowledge and experience to our clients.

MRI is also just a collection of fun, knowledgeable, and hard-working people who are a joy to work with! MRI's client conferences and industry tradeshows are not only valuable business events, but often provide memorable personal experiences for our clients, partners, and employees.

MRI Software Foundation

Transforming the way communities live, work and play

The MRI Software Foundation's mission is to strengthen underserved communities through sponsorships, grants and volunteerism.

MRI Software Foundation UK - Established in January 2022

MRI Software Foundation - Registered as 501(c)(3) private foundation in 2021

MRI Software Australia Public Ancillary Fund - Established in October 2021

Since its inception, the MRI Software Foundation has deployed more than £350,000 on four continents, based on staff member requests, in support of our mission.

- Literacy
- Science & Technology
- Homelessness
- Food Banks & Meal Services
- Disaster Relief

For more information about the MRI Software Foundation please see

<https://www.mrisoftware.com/mri-software-foundation/>.

Social Value

MRI Software views social value as a fundamental outcome for social housing, recognising that providers influence individuals and communities far beyond financial performance. For MRI, social value encompasses improving lives, fostering sustainable tenancies, enhancing community wellbeing, and driving positive change across areas such as employment, health, digital inclusion, and social cohesion.

MRI supports social housing organisations in evidencing and measuring the broader impact of their work through advanced, data-driven systems and analytics. This enables providers to meet strategic objectives like securing funding, complying with regulations, and highlighting service improvements.

Through powerful tools, data integration, and comprehensive reporting, MRI empowers organisations to transform social value commitments into tangible, measurable outcomes — helping housing providers create meaningful change and strengthen the communities they serve.

Furthermore, MRI demonstrates its commitment to social value through active volunteering and community initiatives led by the MRI Software Foundation. The Foundation focuses on supporting local communities, particularly in housing and education, by organising staff volunteer programmes and sponsoring impactful projects.

Examples include:

- Staff volunteering with homelessness charities, food banks, meal services, and literacy programmes directly benefiting social housing communities.
- Employee participation in volunteer events and fundraising efforts to provide educational resources, support community activities, and assist homelessness relief initiatives.
- Donations and support for organisations dedicated to community empowerment, housing assistance, and resident wellbeing, both in the UK and internationally.

For social housing customers, this translates into direct community benefits through hands-on volunteering and broader social impact investments—enabling housing providers to deliver meaningful value that extends beyond housing services alone.
