The ePRINTit Solution

ePRINTit is the world's leading hosted enterprise grade print, scan, copy hosted solution installed globally in large corporations, business centers, shared office complexes, technology centers, airports and airlines, hospitality, libraries and universities. Our success is a testament to the success of our partners, resellers, and the global brands that use our services every day. With tens of thousands of locations worldwide, we manage millions users and transactions daily.

Account access can be SSO utilizing the largest IDP's in the industry including connection in customized environments. We enhance the overall experience for your community through our acclaimed SaaS hosted model and comprehensive security offerings. We eliminate your need for on-premise servers, print driver and additional print management solutions.

Secure Printing Simplified

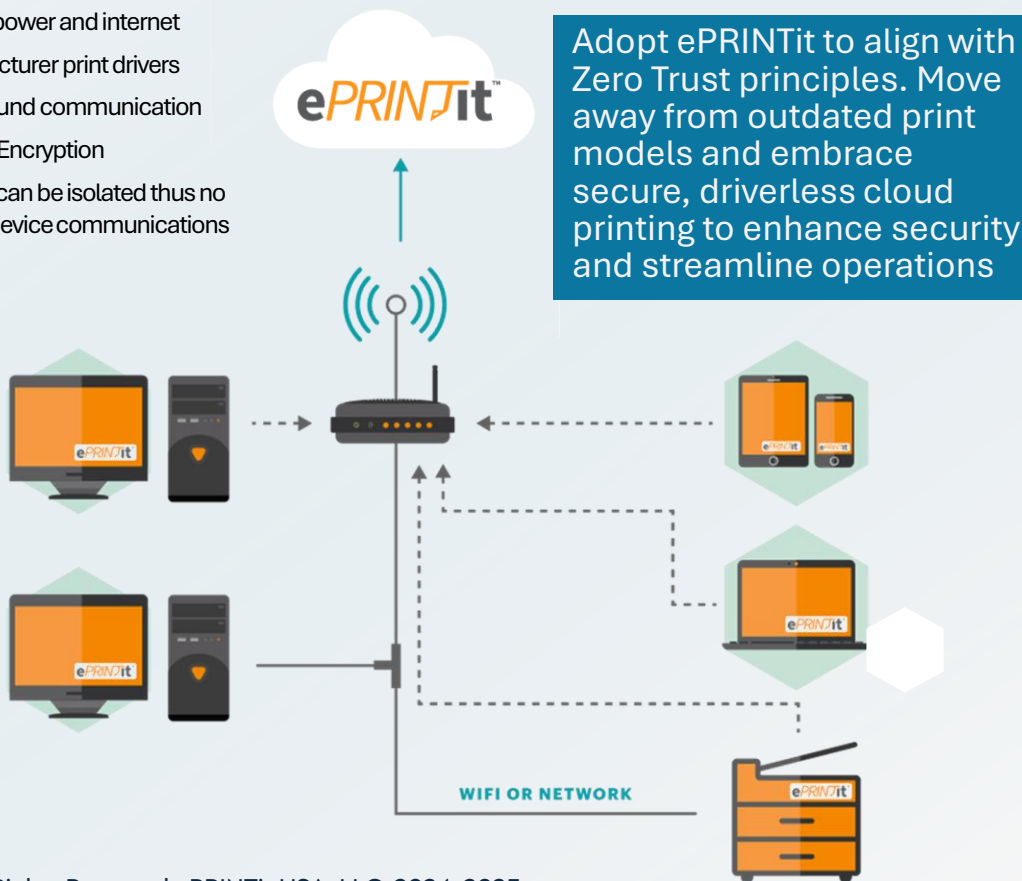

Print from any device to any printer, with centralized management and control. Modern Cloud SaaS platform built on the secure and powerful AWS cloud infrastructure. This innovative service replaces our previous hosted versions of PrinterOn and offers a multitude of benefits for businesses and individuals alike. Protect confidential documents with secure release and pull printing through Port 443 without jeopardizing your inhouse security. Cloud-based SSO and OpenID Connect support. If you believe in the many secure SaaS services you are using today, then believe that the ePRINTit solution will finally get you the Internet office of the future today.

Furthermore, the AWS platform provides industry-leading security to keep your data and documents safe. S3 Buckets employ strong encryption algorithms to safeguard your documents while stored. AWS utilizes secure connections to transmit data, further mitigating potential vulnerabilities.

Unparalleled Flexibility and Control. Manage all print workflows and user access from a single platform. Streamline your printing workflows with a completely redesigned administrative portal. Implement unlimited group policies for granular control over user access and printing permissions.

- Only need power and internet
- No manufacturer print drivers
- Only outbound communication
- End-2-End Encryption
- All devices can be isolated thus no device-to-device communications required.

Challenges in Enterprise Printing

As hybrid workforces become increasingly common, businesses face the challenge of supporting employees who work from both the office and remote locations. While the flexibility of hybrid work is beneficial, it also creates complexities in managing resources like printing. ePRINTit resolves these issues by enabling employees to send print jobs to the cloud and release them from any device when they're ready to print. Whether they are at home, in a co-working space, or back in the office, employees can access shared corporate printers

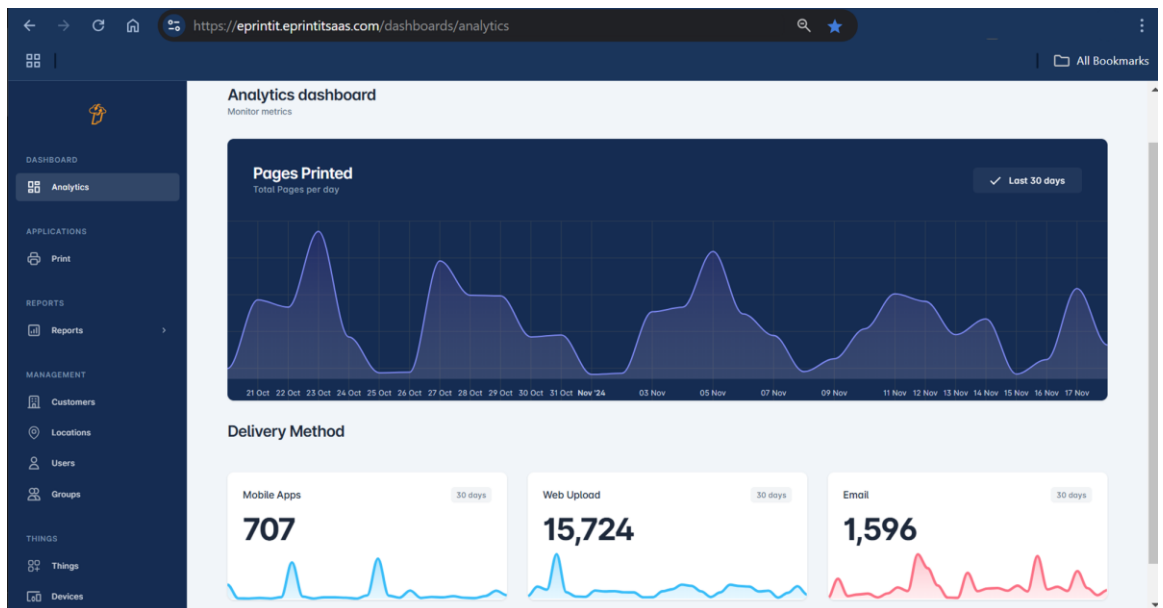

In a corporate setting, data security is a top priority, especially when dealing with sensitive information like financial reports, client contracts, and employee records. The increasing reliance on digital platforms, remote work, and cloud-based services has made data security more complex, especially when it comes to print management. Traditional printing methods can expose companies to significant security risks, leaving sensitive data vulnerable to unauthorized access. Moreover, traditional printers often lack strong security protocols. Print jobs are sent over local networks, making them susceptible to interception.

For Enterprise of all size traditional printing setups can be a source of inefficiency, especially when employees are frequently on the move or working across multiple locations. This is where cloud printing steps in as a transformative technology.

Account Managed Printing

ePRINTit SaaS offers a comprehensive account-managed solution through a single pane of glass, accessible via a secure web application. This platform allows you to generate detailed reports, track printing across all properties, and manage unlimited locations from one portal. Adding or removing a location is simple, and if a printer needs to be changed, you can remotely adjust its capabilities without relying on third-party applications. Additionally, you can easily modify pages, and customize branding, colors, and logos for each property to enhance the personalized experience. Even the mobile apps and release stations can be updated remotely from your management panel, ensuring seamless and efficient operations. We have even ensured that the admins portal is customized to your taste with several versions and unlimited colors and languages to choose from.

*The ePRINTit SaaS solution comes embedded within approved enterprise grade printers. Please contact ePRINTit with the recommended brands and printer types.

Unleash the Power of Unified Print Management

A revolutionary mobile printing solution that empowers users to print from their smartphones, tablets, or computers with unmatched ease and security. A 100% SaaS solution, eliminating the need for app downloads, hardware installation, or complex driver management.

Centralized Control:

Manage everything from print drivers and mobile apps to web portals and email printing – all from a single, intuitive interface.

Cloud-Based Power:

Your printing infrastructure is secure, scalable, and always up-to-date. Effortless Scalability & Device Agnosticism.

Print Security:

Your data is protected with industry-leading encryption. Effortlessly manage printing across disparate networks, regionally or globally, with ease.

Group Policies:

Enforce printing policies and streamline user access with Group Policies, Printer Configurations and Single Sign-On (SSO).

Detailed Reporting:

Gain valuable insights with detailed, user-friendly reports. Full print management system.

Embedded Printing:

Integrate printing seamlessly into existing applications for a truly unified workflow.

Thin Client Friendly:

Our solution works flawlessly with all thin clients, ensuring universal compatibility.

Universal Drivers:

Enjoy a seamless printing experience from any device – Mac, PC, or Chrome

Microsoft Intune:

Benefit from the security and convenience of Microsoft approved Intune integration.

Key Security Features

At ePRINTit, we take security seriously. Our cloud-based solution, hosted with 100% microservices architecture, prioritizes data protection, regulatory compliance, and user trust. We rigorously evaluate our authentication methods to prevent unauthorized access, implement fine-grained access controls, and use encryption in transit and at rest to safeguard sensitive information. Our mobile apps employ strong authentication mechanisms, and all data transmitted between the mobile app and our cloud services are encrypted. We manage app permissions carefully and follow best practices for data storage, including redundancy and automated backups. Additionally, we assess third-party integrations for security risks and ensure compliance with industry standards and data protection laws. Ensure to ask us for our detailed whitepaper on our solution's security.

- Robust authentication methods prevent unauthorized access.
- Role-based access limits user privileges.
- Encryption in transit (HTTPS) and at rest (256 RSA).
- Strong authentication mechanisms, SSO and MFA.
- Secure protocols prevent eavesdropping.
- App Permissions: Managed to prevent overreach
- Data Storage: Redundancy, automated backups.
- Strong cryptographic algorithms for sensitive data.
- Third-Party Integration Security
- Compliance: Adherence to industry standards (ISO 27001, NIST) and data protection laws (GDPR, CCPA).

Next level Mobile Printing For the Enterprise

Experience a whole new level of mobile printing . Connect your employee's globally to the only printing application that is approved protected Intune APP. Full SSO using your higher authentication solution. Connect directly to the employee's cloud accounts that you authorize. The choice in any enterprise organization that requires managed and authenticated APP's. Admins can track all usage by Mobile, Desktop, web or email printing functions.

Secure your office, home and hybrid workers with a mobile solution that surpasses all competitors' offerings. For mobile printing.

Employees can use either the iOS or Android App, upload from any file location permitted, select all their print options available for that printer on the mobile device and can either wait until they get to the office to release, or release it immediately from their Smart Phone based on Admin permissions.

Microsoft Intune Protected Mobile APP

ePRINTit is one of the only Microsoft Protected Intune approved APP for printing. Intune App's are enabled with rich set of mobile application protection policies. In addition to supporting the core App Protection Policy settings, apps are also capable of supporting advanced App Protection Policy and App Configuration Policy settings.

- Protecting account data while leaving personal data untouched
- Encrypting school account data
- Configuring account web links to open inside a managed browser
- Enforcing access requirements to access school account data
- Enforcing conditional launch behaviors
- Applying data loss prevention policies
- Enabling app protection without requiring enrollment

Accessibility Equals Access for Everyone by Design

ePRINTit is committed to providing equal opportunity access across our portfolio. We believe nobody should feel restricted in accessing technology in the modern age.. Our solution, in partnership with industry leaders, offers a comprehensive suite of tools and modern access that sets our products apart.

Our Mobile and web applications come with 165 language selections, along with the UserWay widget for the visually impaired. Our print mobile APP allows for document release directly from your smartphone eliminating the need to touch the printers control panel.

We have been recognized by the American Library Associations, Modern Library awards as a Platinum solution, voted on by their members annually for over 7 years consecutively.
