

Copilot for Security: AI-assisted Incident Response (IR)

Enhance your existing Incident Response retainer with Bridewell by leveraging Microsoft Copilot for Security to aid incident investigation and consume less hours within your retainer. This engagement can help you reduce mean time to respond and increase ROI from your security investment.

Common Challenges

Speed and Scale of Attacks

As the volume, velocity, and sophistication of threats grows, being able to respond to threats rapidly is crucial to your security posture.

Complex Environments

With organisations scaling their environments, it is more challenging to have a unified and clear view of potential threats.

High Volume of Alerts

A high volume of alerts creates a lot of 'noise', which makes it difficult to quickly detect and respond to threats.

Achieving 24/7 Incident Response Capabilities

Smaller in-house teams may lack the people and/ or resource to achieve 24/7 incident response capabilities.

How Bridewell Can Help

Investigation Transparency

Gain full visibility of incident investigations, with a consolidated view of alerts, device inventory, vulnerability management, and threat hunting.

Reduced Mean-Time-To-Respond (MTTR)

Utilise custom prompts within Copilot to speed up root cause analysis and react to security incidents at pace, thereby reducing risk and impact.

Maximise the Capabilities of Your In-house Security Team

Deploying Copilot for Security within your in-house team can augment their capabilities by providing step-by-step guidance on certain tasks, summarising vast data signals and providing guidance on response actions.

Improved Return on Investment

By utilising Copilot to perform routine functions within your IR retainer, Bridewell consultants can focus their time on higher-priority activities. This means that less hours are consumed within your IR retainer, improving your ROI from the service.

Schedule a Consultation With Our Team

Speak with our team for more insight on how you can leverage Copilot for Security.

If Copilot is not yet deployed, Bridewell will review your level of preparedness for Copilot and deploy it across your organisation.
