Pipeline Manager

Overview

Pipeline Manager helps contracting authorities track and manage their procurement pipelines and meet Procurement Act 2023 requirements. Key contract and tender pipeline information is stored in one place and can be exported for publication, with user notifications and real-time dashboard reporting.

Quick access to supporting procurement documents

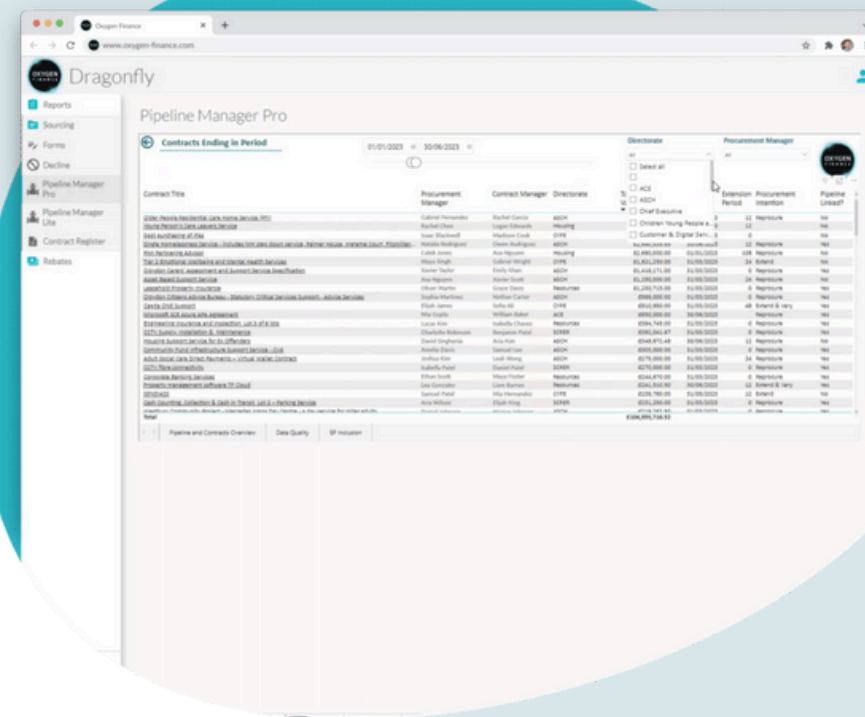

With Pipeline Manager you can quickly view further detail on a procurement event, including links to supporting documents.

Receive notifications when your contracts are coming to an end

Pipeline Manager prompts you to start reviewing your options with plenty of time before the contract ends, helping you manage requirements and market engagement more effectively.

Get help keeping your pipeline up to date

You can also access our managed service, with ongoing support to help keep your pipeline accurate and up to date.

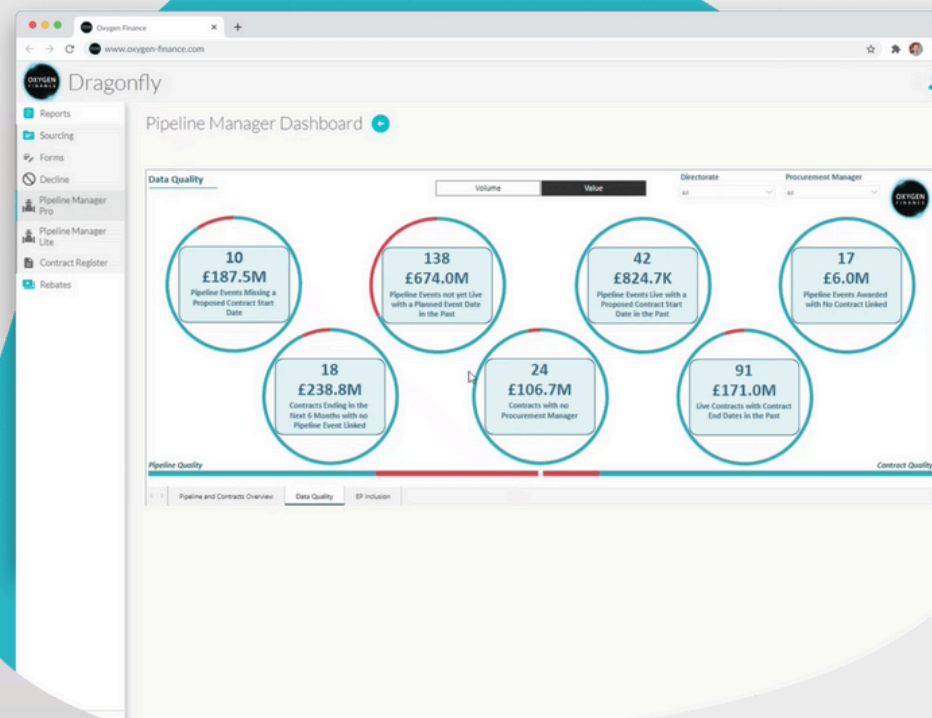

Access a real-time dashboard to drive your procurement decisions

Powerful reporting shows workload bottlenecks and at-risk projects, helping you gain control over data quality at the click of a button.

Meet the requirements of the Procurement Act 2023

Create your dataset for your Pipeline Notice at the click of a button – without any extra effort.

- Manage your whole pipeline all within one system
- Multiple logins - service areas can make their own updates
- Easy to manage large programmes of work with targeted notifications
- Full audit trail detailing field changes by user
- Easily exported to be compliant with new procurement regulations
- Field Controls to ensure data is consistent and reportable
- Automated KPI dashboard and tailored reporting

Additional Service Options

Managed Service

Data and information gathering from Service Areas will be managed by the Oxygen team, meaning any procurements undertaken outside of your centralised procurement function will be accurately recorded in the system, helping you gain control over your spend.

Data Validation

Oxygen to undertake data validation and load. Oxygen to collate current spreadsheets, validate against agreed rules, correct formatting, fill in missing information etc prior to loading into the tool. To include population of category taxonomy (using Oxygen Insights categories) if required.

Custom Data Field / Change Request

Additional custom data fields can be specified and created based upon the requirements of the contracting authority.

Additional Implementation Support

Two days' support is provided as part of the Implementation Fee but additional support is available to be added on to provide enhanced onboarding.

Functionality

Pipeline Manager is a cloud-based Software as a Service (SaaS) platform. Service is delivered via a secure web front-end and log-ons are provided to registered users on a named user basis.

The only client-side technology requirement is an internet-connected PC or tablet running up-to-date browsers.

Existing Clients

Training

Comprehensive user onboarding is undertaken to set up all users and run through all the core platform functionality specific to their job roles and is typically delivered via MS Teams (or equivalent).

Ordering

The service starts within two working days of the receipt of a valid order and runs for the subscription term. The maximum initial length of a contract is 36 months, with the option to extend by a further 12 months.

Ordering is via the G-Cloud 15 Framework.

Background to Oxygen Finance

Our organisation exists to help businesses thrive, and deliver a wider benefit by funding public services within the local community.

Since 2004, we've created financial benefits and improved social value outcomes for the NHS, Local and Central Government, and FTSE 100 companies.

Oxygen Finance helps public and private organisations do business with each other. We make payments easier and faster, so organisations can trade more effectively, and use big data and payment expertise to deliver a better social outcome.
