

SMART: DATA – LOCAL GOVERNMENT

SERVICE DEFINITION DOCUMENT

G-Cloud 15 Framework | Lot 2b: Cloud Software

SERVICE OVERVIEW

SMART: Data for Local Government provides a governed data enablement layer that prepares council data for AI, analytics, and automation use at scale. **Built on the ICS.AI SMART: Platform**, the service enables local authorities to ingest, structure, govern, and expose data safely for use across SMART: Front Door, SMART: Staff Copilot, and SMART: Agentic services.

The service focuses on making council data **AI-ready**, rather than replacing existing systems. It addresses common challenges including fragmented data sources, inconsistent data quality, limited metadata, and unclear access controls, while maintaining public sector governance, transparency, and accountability.

SERVICE TIERS

Tier	Description
Foundation	Ingestion of priority structured and unstructured data sources Basic data normalisation and preparation Core metadata capture and classification Role-based access controls Data prepared for AI consumption (RAG-ready) Audit logging for data access and use Foundation provides a controlled starting point for councils beginning their AI and data maturity journey.
Premium	Includes all Foundation capabilities, plus: Expanded data source coverage across services Data quality rules and validation checks Enrichment and semantic tagging Improved metadata management and discoverability Monitoring and reporting on data usage Premium supports broader adoption of AI and analytics across multiple council functions.

Tier	Description
Specialist	Includes all Premium capabilities, plus: Domain-specific data models (e.g. social care, housing, revenues) Cross-system data products spanning multiple services Data structures optimised for agentic and automation use cases Advanced governance workflows and approval controls Enhanced lineage and dependency tracking Specialist enables councils to support complex AI and automation scenarios safely.
Ultra	Includes all Specialist capabilities, plus: Organisation-wide data fabric spanning services and domains Advanced lineage, assurance, and audit capabilities Support for multi-domain AI and agentic orchestration Scaled performance and resilience for enterprise use Priority optimisation and support Ultra provides a mature, enterprise-grade data foundation for AI-native local authorities.

SERVICE SCOPE

SMART: Data supports the end-to-end lifecycle of data readiness, including:

- Ingestion of structured and unstructured data from council systems
- Data transformation, normalisation, and enrichment
- Metadata management, classification, and tagging
- Data quality controls and validation
- Secure access and role-based exposure of data
- Lineage, auditability, and usage tracking

The service enables data to be safely consumed by AI models, copilots, analytics tools, and agentic workflows.

KEY FEATURES

- Governed data pipelines for public sector use
- Central metadata and classification management
- Data lineage and audit trail for transparency
- Integration with existing council systems
- Secure exposure of data to AI and analytics services
- Monitoring of data usage, quality, and access
- No requirement to replace existing data platforms

KEY BENEFITS

- Improves quality and consistency of data used by AI
- Reduces risk associated with uncontrolled data access
- Enables faster deployment of AI and automation use cases
- Supports transparency and audit requirements
- Maximises value from existing council data assets
- Provides a scalable foundation for AI maturity

TECHNICAL ARCHITECTURE

Built on the **ICS.AI SMART: Platform**, providing:

- Microsoft Azure deployment with UK data residency
- Secure data ingestion and processing pipelines
- Metadata and governance services
- Integration with retrieval, copilot, and agent runtimes
- Identity integration via Microsoft Entra ID with RBAC
- Central telemetry for data usage, quality, and risk

LOCAL GOVERNMENT DATA SOURCES

SMART: Data supports integration with common local authority data sources, including:

- Line-of-business systems (e.g. revenues, benefits, housing)
- Case management and CRM systems
- Document and records management platforms
- Intranets and policy repositories
- Data warehouses and reporting platforms

Integrations are configured in line with local authority data governance and information management policies.

GOVERNANCE, SECURITY & COMPLIANCE

- Role-based access control for data and metadata
- Policy controls for data exposure and use
- Data lineage and audit logging
- Sensitive data handling with redaction and minimisation
- Human oversight of data onboarding and changes
- WCAG 2.2 AA compliant management interfaces
- GDPR compliant with UK data residency

IMPLEMENTATION APPROACH

- **Discover & scope** – priority data sources and use cases
- **Configure governance** – access rules, policies, classifications
- **Ingest & structure** – connect systems and prepare data
- **Validate & assure** – data quality and governance checks
- **Enable consumption** – expose data to AI and analytics
- **Operate & optimise** – ongoing monitoring and improvement

SUCCESS MEASURES

- Number of AI-ready data sources onboarded
- Data quality and completeness metrics
- Reduction in manual data preparation effort
- Time to enable new AI and automation use cases
- Governance and audit outcomes

DEPENDENCIES & PREREQUISITES

- SMART Platform Core (included with any SMART product)
- Microsoft Azure subscription (UK or EU hosted)
- Microsoft Entra ID for identity management
- Access to source systems and data

USER SUPPORT

The response time is 24 hours, depending on the contract signed by the client and applies during working hours from Monday to Friday. The Support levels are as follows:

Level	Description	Response
Level 1: Urgent	System not responding or critical function loss that affects all users.	24hr fix/workaround
Level 2: High	A function loss that causes significant disruption to business and users.	Priority response
Level 3: Normal	Function loss that affects some users but will not stop them from being able to do other tasks.	Standard response
Level 4: Low	A cosmetic issue or a minor function loss that affects some users.	Scheduled response

This service, up to an agreed number of hours per month, is included in the cost of the Licence for the SMART: Data. Additional support hours can be purchased if required.

DISCLAIMER

This service description was prepared for G-Cloud 15 and will remain on the Digital Marketplace for the duration of the framework period (up to 24 months). As AI technology and our platform capabilities evolve rapidly, specific features, integrations, or functionality described in this document may have changed since publication.

Before purchase, we recommend contacting ICS.AI to confirm current capabilities and any new features that may have been added since this description was published.
