

PARICO

G-Cloud 15: Service Definition Document

Cross Domain Gateway as a Service

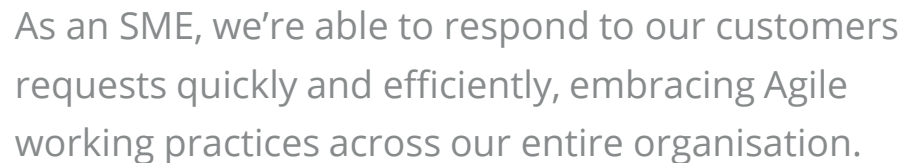

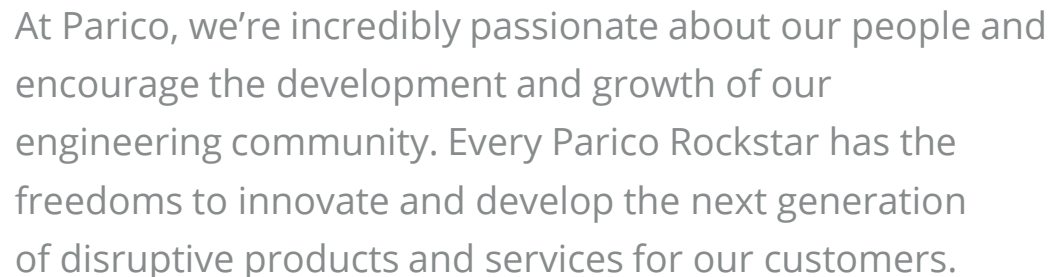

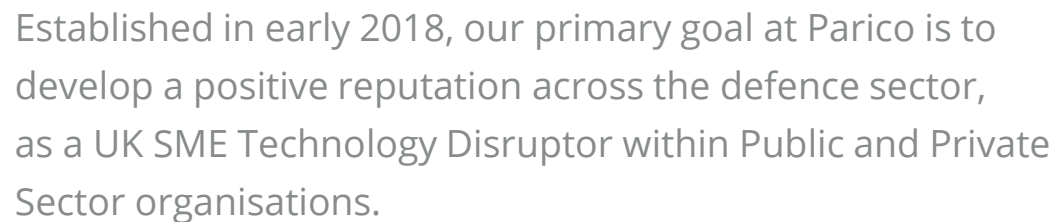

Parico's suitability qualified and experienced technical team can deliver and support, as a service, Cross-Domain Interoperability services. We deliver and support secure, NCSC assured, Low, Medium and High Assurance non-real-time and real-time Interoperability services across security classification boundaries.

FEATURES

- Provision of cross-domain gateways at Tiers 1-3
- Design based on NCSC's Cross Domain System architectural patterns
- Multi-enclave and multi-compartment-controlled information sharing with Partners Across Government
- Automation and Orchestration built in using Infrastructure as Code (IaC)
- Provision of Secure File-based Transfer and Secure BrowseDown
- Enables Secure Dataset Transfer (Bulk Data) and Secure Record-based Transfer
- Enables Secure Binary Object Transfer (executables, software packages)
- Managed Service includes design, build, test, deployment, support and maintenance
- Support includes provision of technology roadmaps and an evergreen solution
- Provision of service management, security and asset management

BENEFITS

- Share data holdings (internally/externally) to collaborate on business operations
- Access and respond to data in other organisational systems
- Increase data exploitation opportunities across all tiers of data classification
- Provides interoperability across Tiers 1 to 3
- Enables access to data quickly and efficiently
- Flexible, agile, approach to service delivery
- SC and DV cleared suitability qualified and experienced technical resources
- Enables collaboration with less trusted organisations
- Eliminates manual data transfer processes
