

PARICO

G-Cloud 15: Service Definition Document

Low Code and No Code Application Design and Development

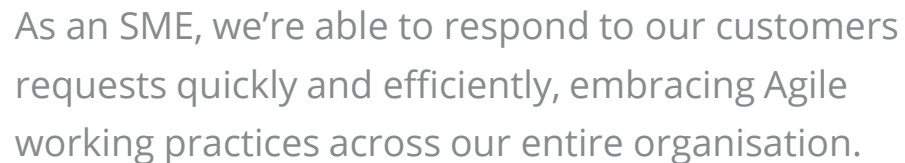

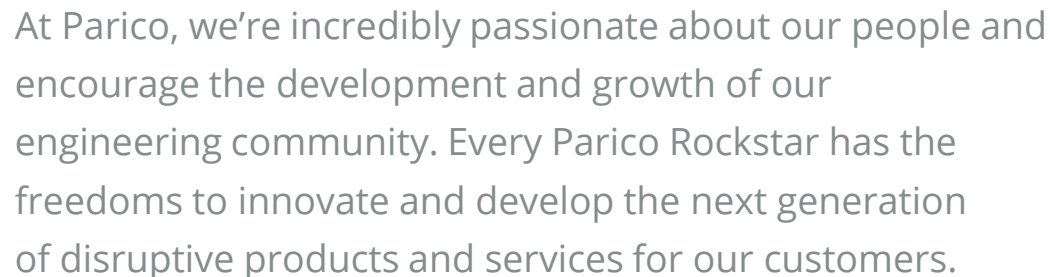

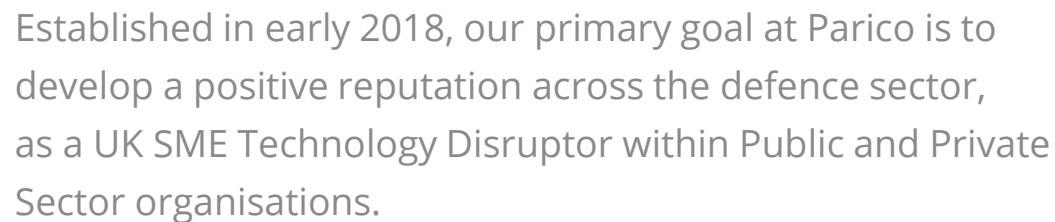

Parico's Low Code and No Code application design and development services enables organisations to quickly enact digital transformation, using development platforms to implement modern digital services, with open-standards interfaces that are compliant with Government Digital Service Standards.

FEATURES

- Utilises a range of development platforms (Mendix, Appian, OutSystems etc.)
- Promotes out-of-the-box functionality using pre-configured modules and functions
- Cross-platform accessibility enables apps to operate on all core platforms/devices
- Promotes streamlining of stages such as debugging, testing, and deployment
- Enables non-technical customers in developing applications with a 'drag-and-drop' mentality

BENEFITS

- Accelerates digital innovation and transformation for public sector organisations
- Reduces a dependency on hard to hire technical skills
- Bridge the last-mile of integration with end-to-end automation capabilities
- Formulate innovative solutions to re-energise legacy applications, systems and platforms
