

PARICO

G-Cloud 15: Service Definition Document

System Integration, Federation and Interoperability Engineering Service

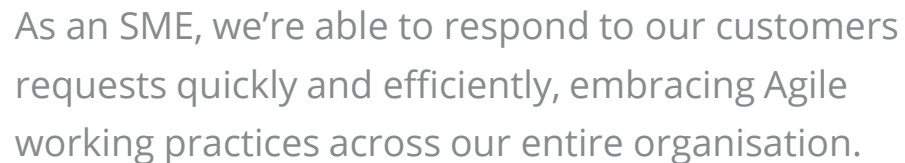

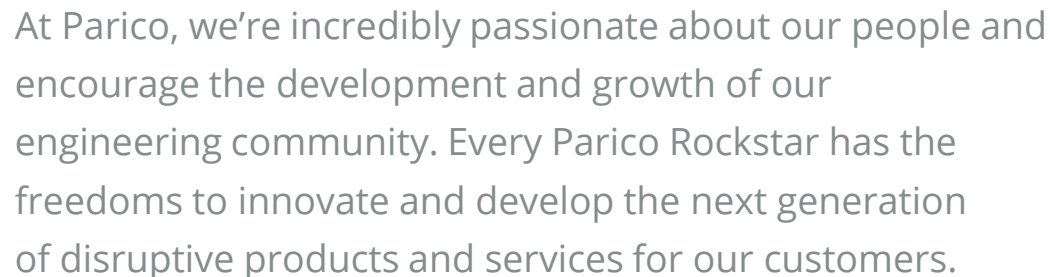

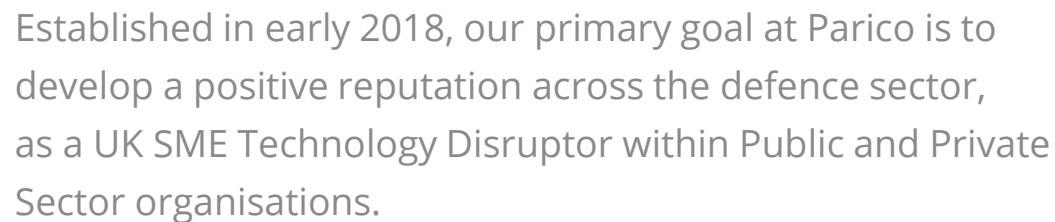

Parico's System Integration, Federation and Interoperability Engineering Service enables Defence customers services to design and build cloud-based solutions that interface with external Computers, Communications, Command and Control, Intelligence, Surveillance and Reconnaissance (C4ISR) information exchange systems and platforms.

FEATURES

- Federation of Unmanned Aerial Vehicle real-time video feeds; PROTECTOR/REAPER.
- Integration of Future-Gateways services for secure Information Exchange with Partners-of-Choice.
- Integration and federation with legacy Maritime Communication Information Services.
- Rich data information exchange with MODNET and OpNET infrastructure platforms.
- Modular architecture patterns to reduce change and integration complexity.

BENEFITS

- Loosely-coupled architecture design and implementation services providing a rich user-experience.
- Significant knowledge and experience across the Fixed/Deployed defence landscape.
- Enable early-wins and fast feedback through proof of concepts.
- Enhanced C4ISR security and resilience at OFFICIAL, SECRET and Above-Secret.
- SC and DV cleared engineering professionals.
