

Information Security Officer as a Service (ISOaaS)

ISOaaS provides an experienced Information Security Officer to manage an organisation's information security and risk management operations on a fractional basis, ensuring all systems and data are secure and compliant with regulatory requirements.

The Information Security Officer service is a convenient and cost-effective way for businesses to access industry-leading cyber security knowledge in a flexible and agile manner. A professionally certified and experienced security consultant enables an organisation to benefit from their years of security expertise and delivers clarity, confidence, and certainty for your digital, cyber security and network journey.

Our certified Information Security Officers hold a number of professional industry qualifications which will typically include NCSC CCP, CISSP, CISM, ISO 27001 audit/implementor and SABSA. They will support clients to accelerate, shape and deliver a coordinated information security program and manage business security risks.

What are the benefits?

Service Delivery

Fortis works with each client to identify the most appropriate level of support to align with business objectives, budget, and timeline. The Information Security Officer then works for the business for a pre-agreed number of days every month, usually over the course of a 12 month period, acting as a central point of contact and guidance for all information security matters.

Key Features

Additional Services

Fortis Cyber® can provide additional support by offering a range of capabilities delivered by industry experts with in-depth knowledge and experience in information security, data protection, governance, and security risk management.

- Fortis Cyber® is a CREST accredited company for both penetration testing and vulnerability assessments and can provide a full range of penetration testing services (external, internal, web-application, cloud, mobile, APIs etc)
- Delivery of industry certifications and standards such as Cyber Essentials, ISO standards, NIS2 and SOC2
- Incident response training and digital forensics
